

# SAXS data reduction and analysis

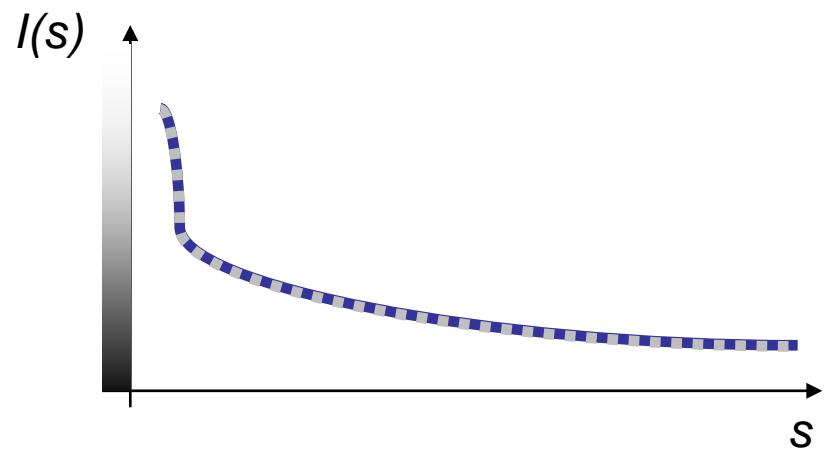

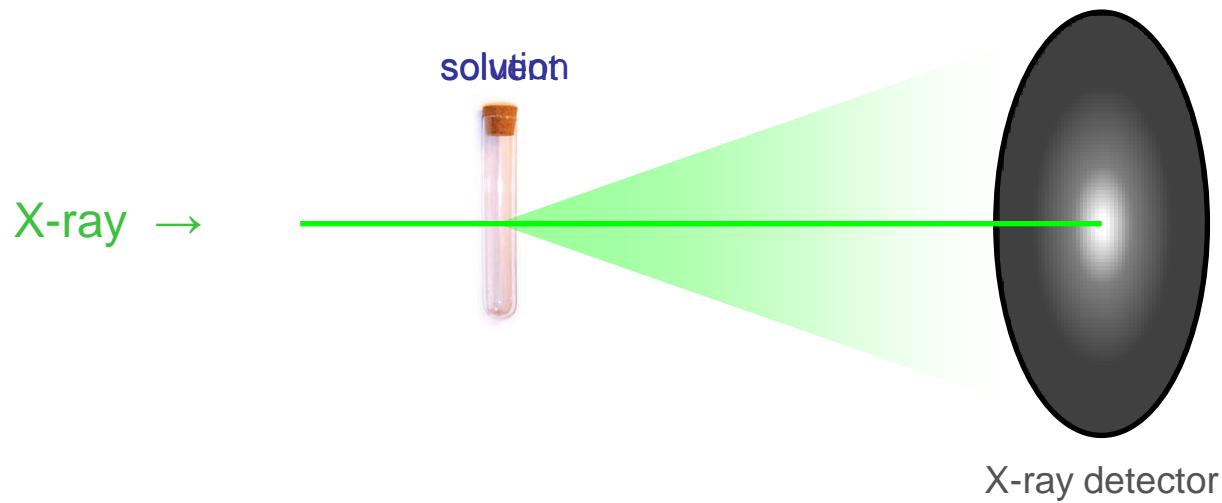

Daniel Franke  
EMBL Hamburg

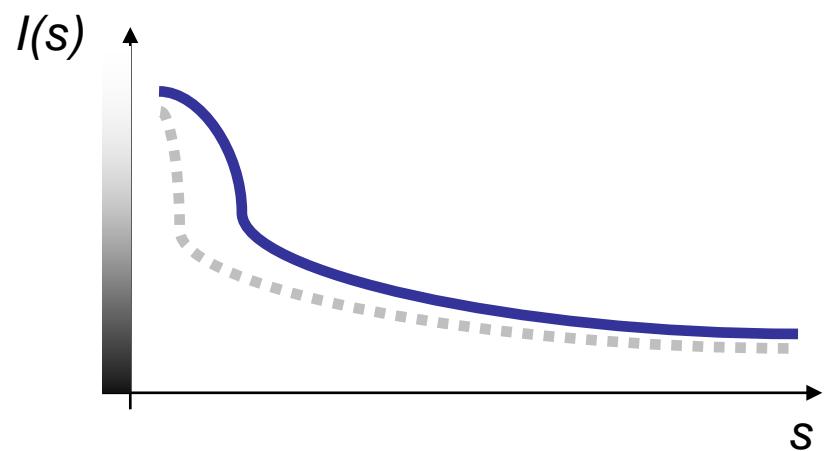

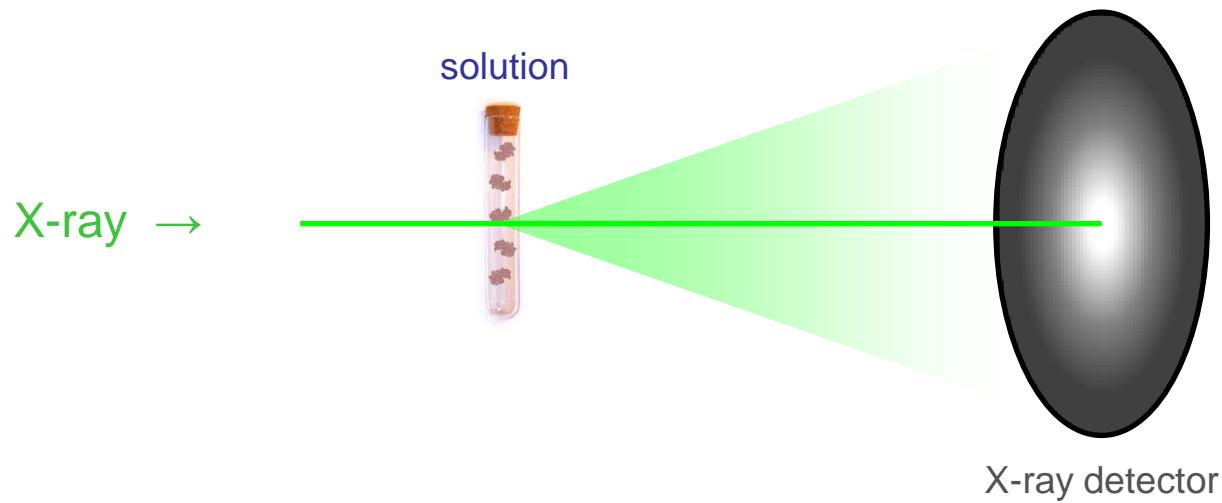

# Outline

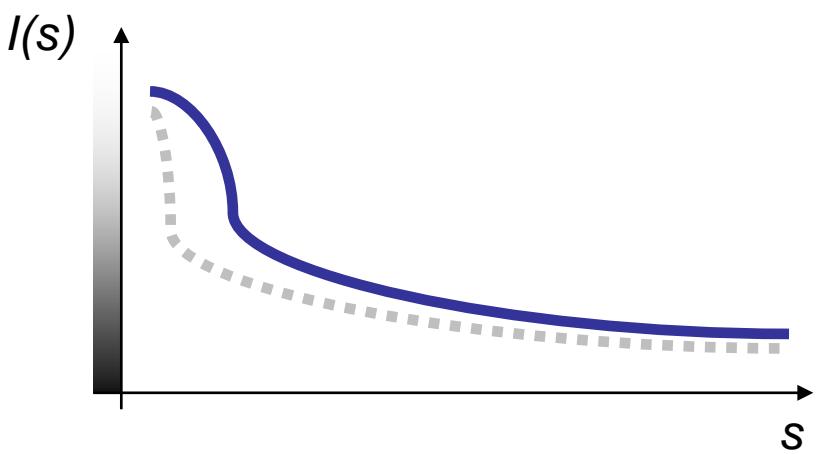

- SAXS experiment setup
- 3D → 2D → 1D
- Background subtraction
- Concentration effects
- $R_g$ , MM
- Volume
- Distance distribution function  $p(r)$

# SAXS experiment

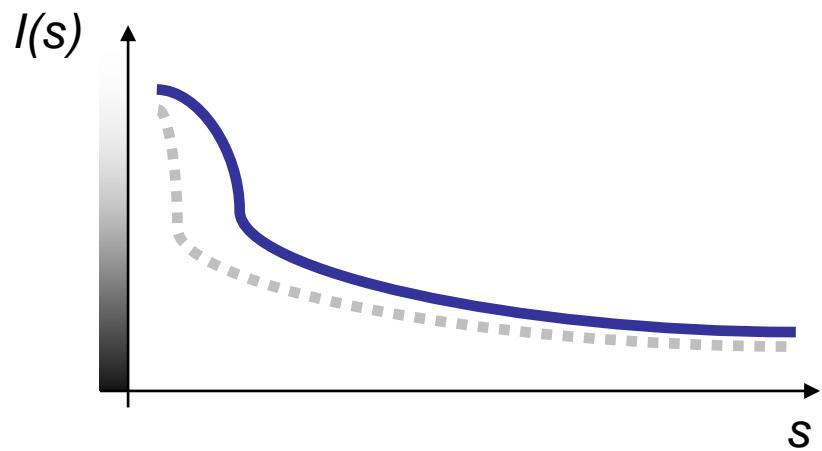

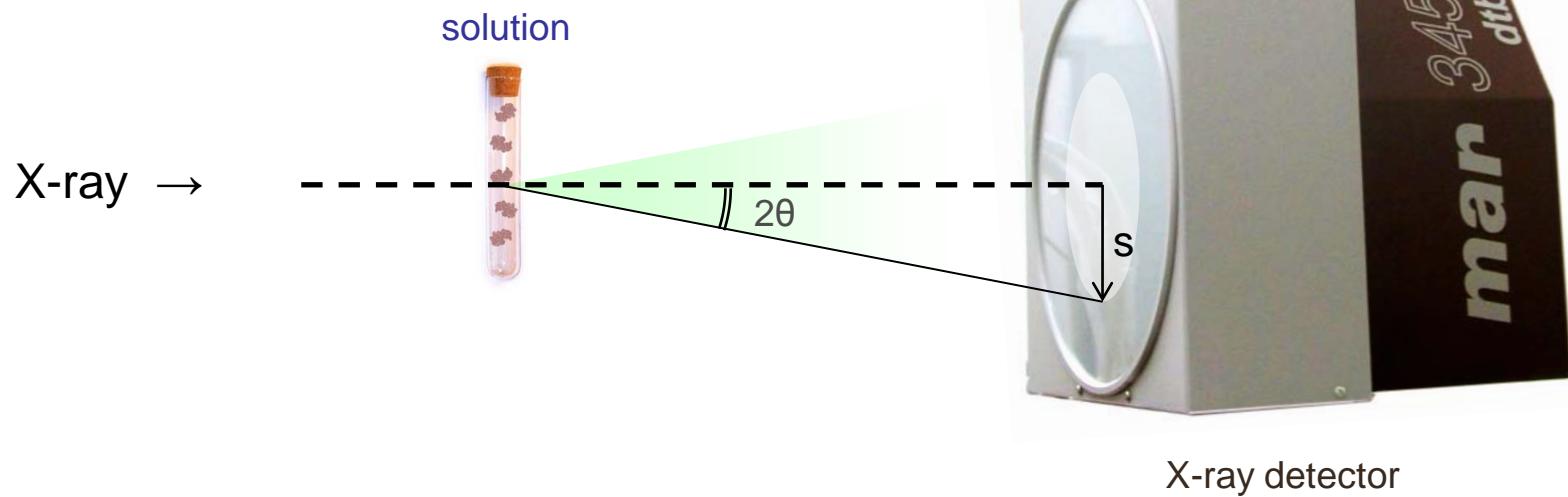

# SAXS experiment

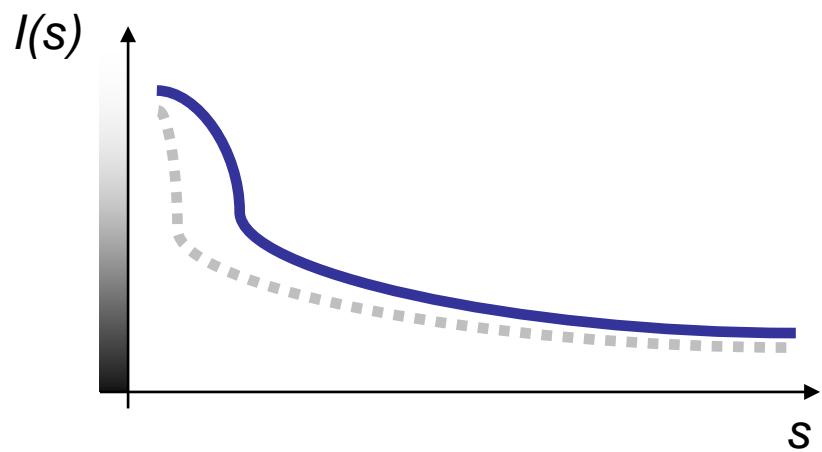

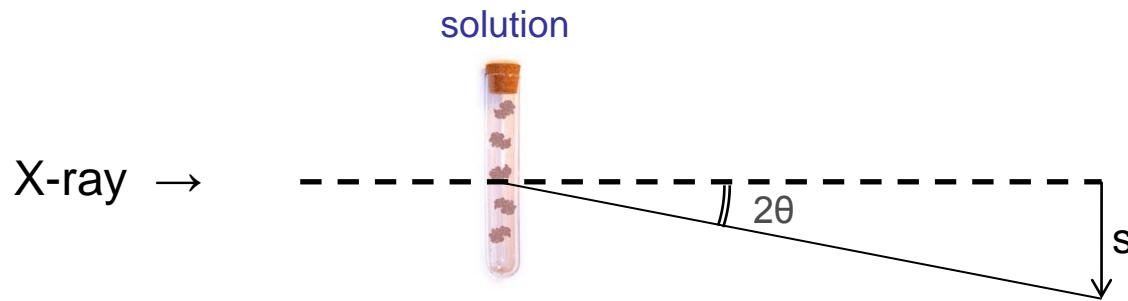

# 2D → 1D

$$|s| = 4\pi \sin\theta/\lambda$$

$s$  – scattering vector  
 $2\theta$  – scattering angle  
 $\lambda$  – wavelength  
 $I(s)$  – intensity

# 2D → 1D

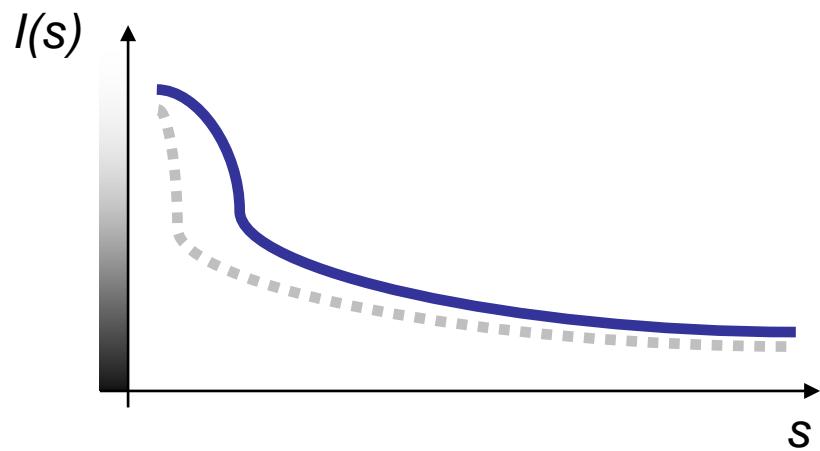

$$|s| = 4\pi \sin\theta/\lambda$$

$s$  – scattering vector  
 $2\theta$  – scattering angle  
 $\lambda$  – wavelength  
 $I(s)$  – intensity

# Normalization

- Transmitted beam
- Exposure time

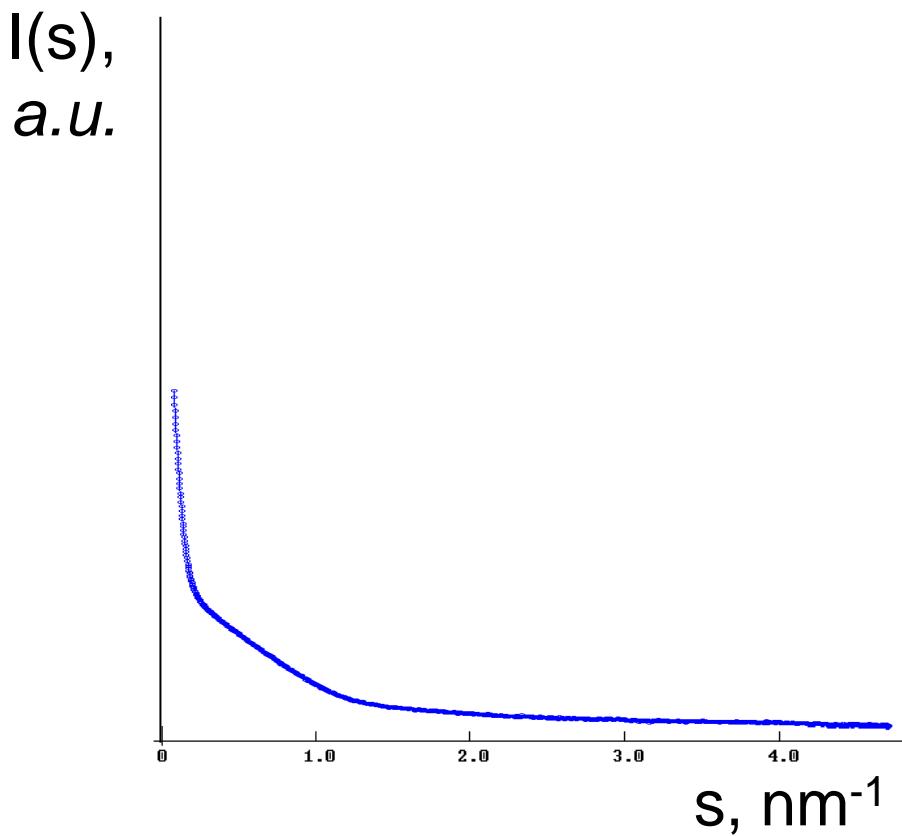

# Notations and units

$$|s| = 4\pi \sin\theta/\lambda$$

$2\theta$  – scattering angle

$\lambda$  – wavelength

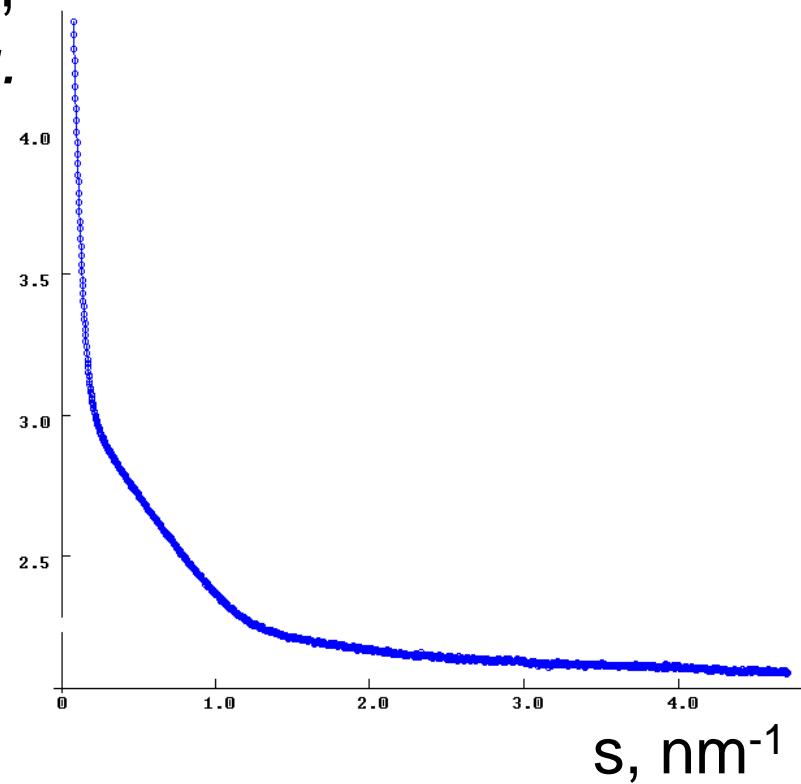

# Notations and units

$$|s| = 4\pi \sin\theta/\lambda$$

$2\theta$  – scattering angle

$\lambda$  – wavelength

Log I(s),  
*a.u.*

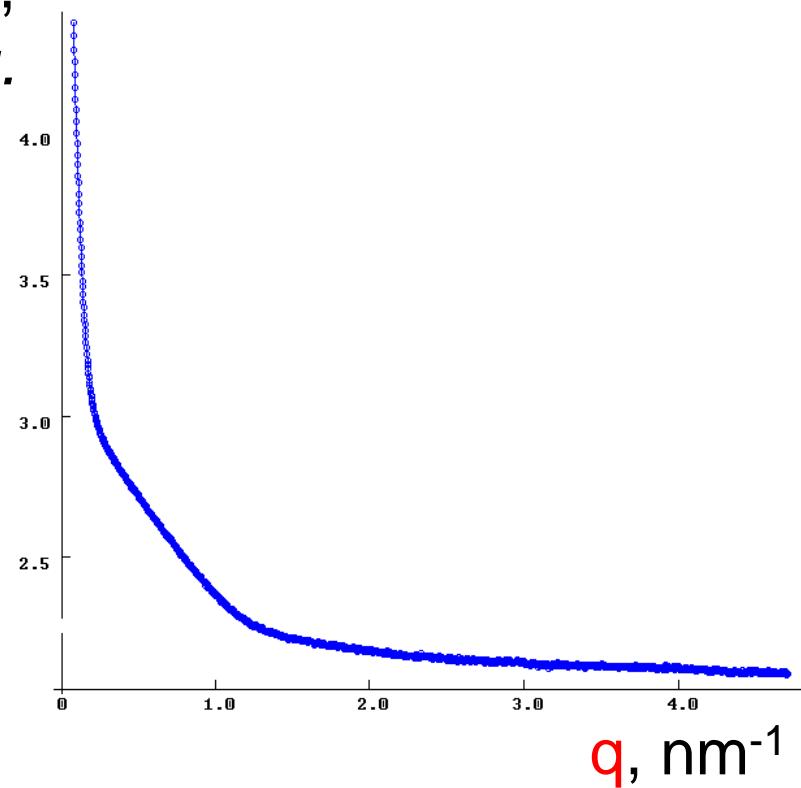

# Notations and units

$$|\mathbf{q}| = 4\pi \sin\theta/\lambda$$

$2\theta$  – scattering angle

$\lambda$  – wavelength

Log  $I(\mathbf{q})$ ,  
*a.u.*

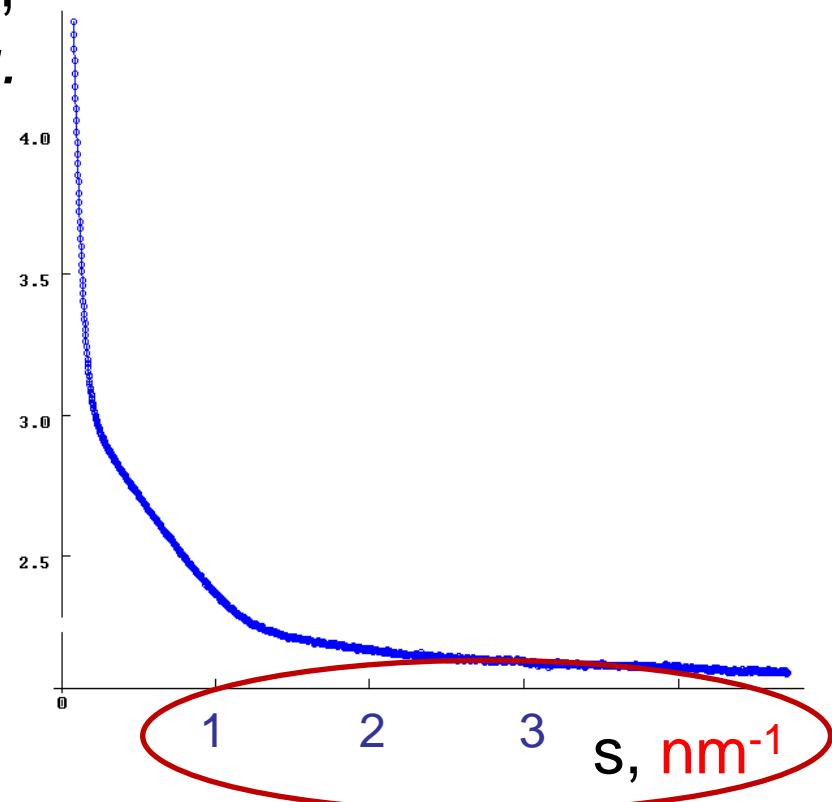

# Notations and units

$$|s| = 4\pi \sin\theta/\lambda$$

$2\theta$  – scattering angle

$\lambda$  – wavelength

Log I(s),  
*a.u.*

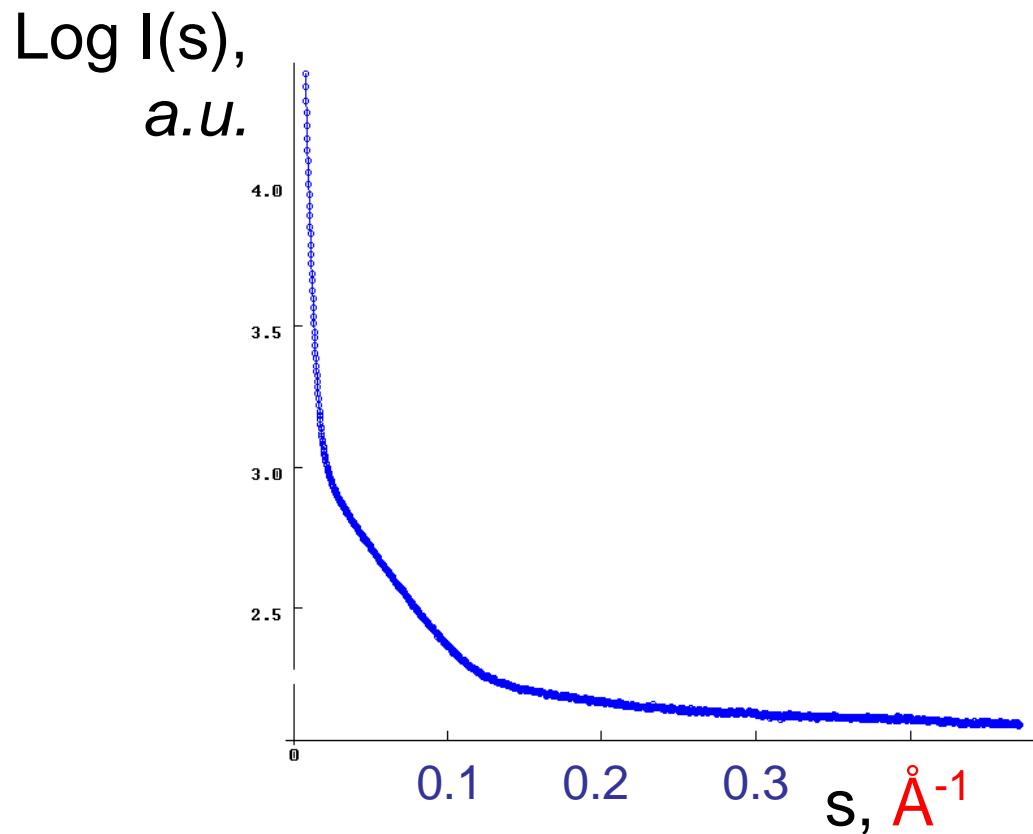

# Notations and units

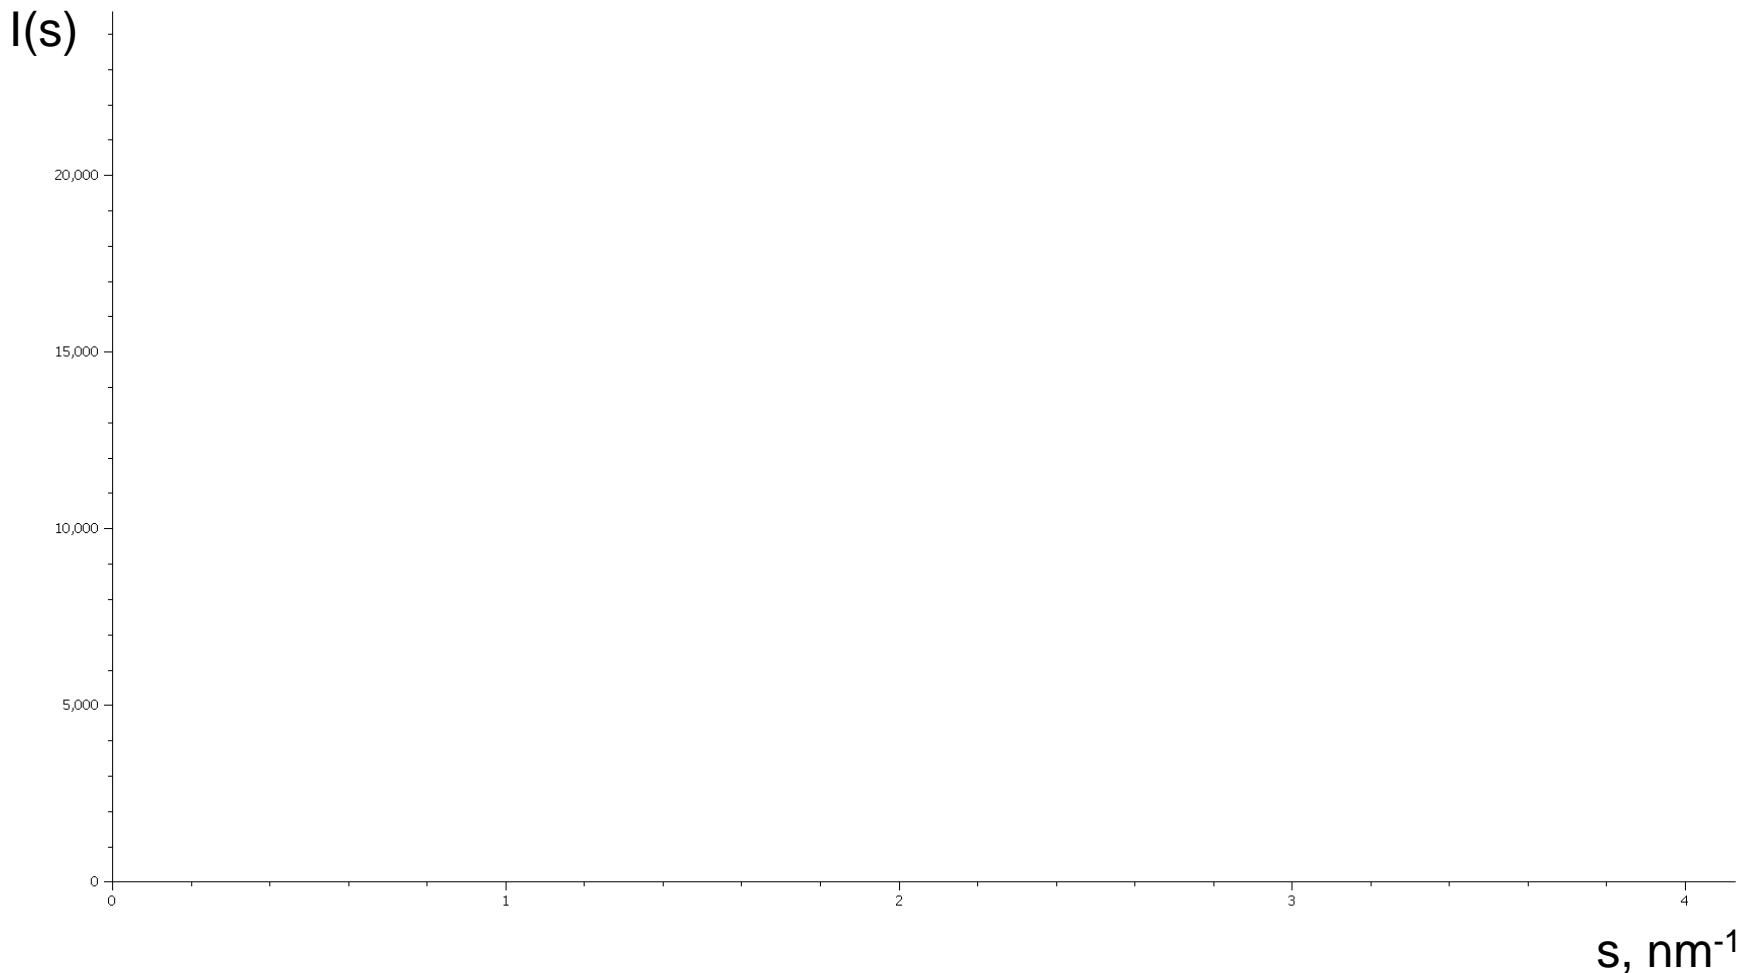

$$|s| = 4\pi \sin\theta/\lambda$$

$2\theta$  – scattering angle

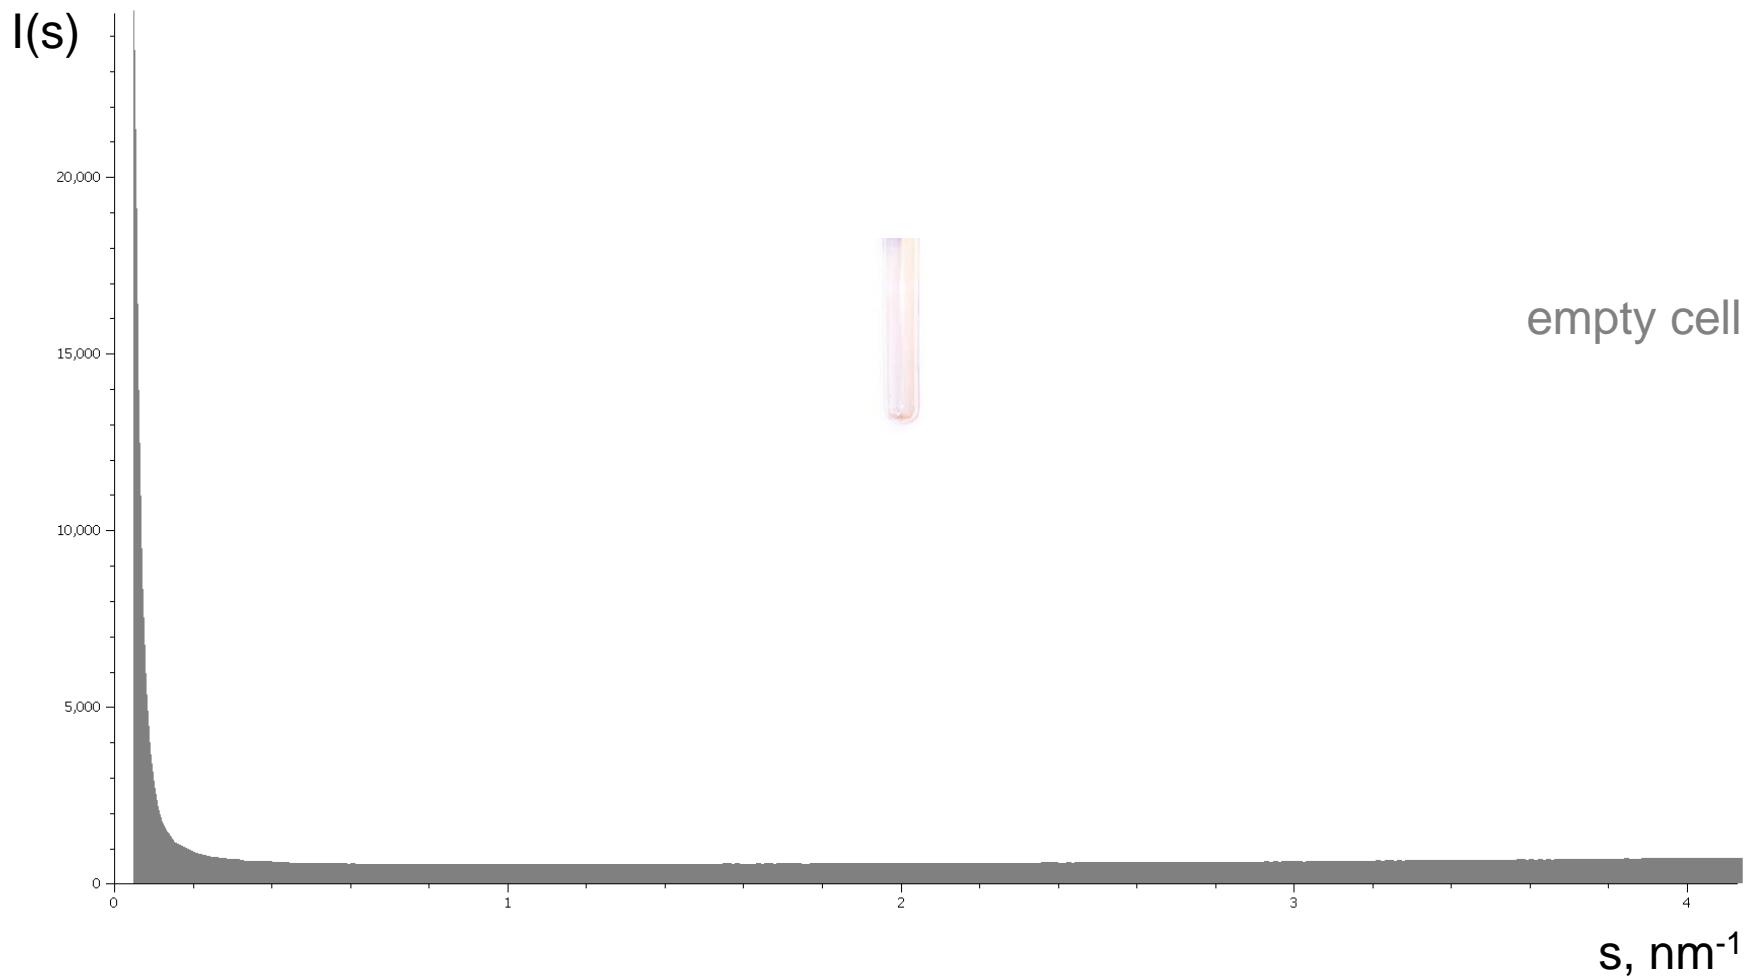

$\lambda$  – wavelength

# Dilution series

***Low and High Concentration***

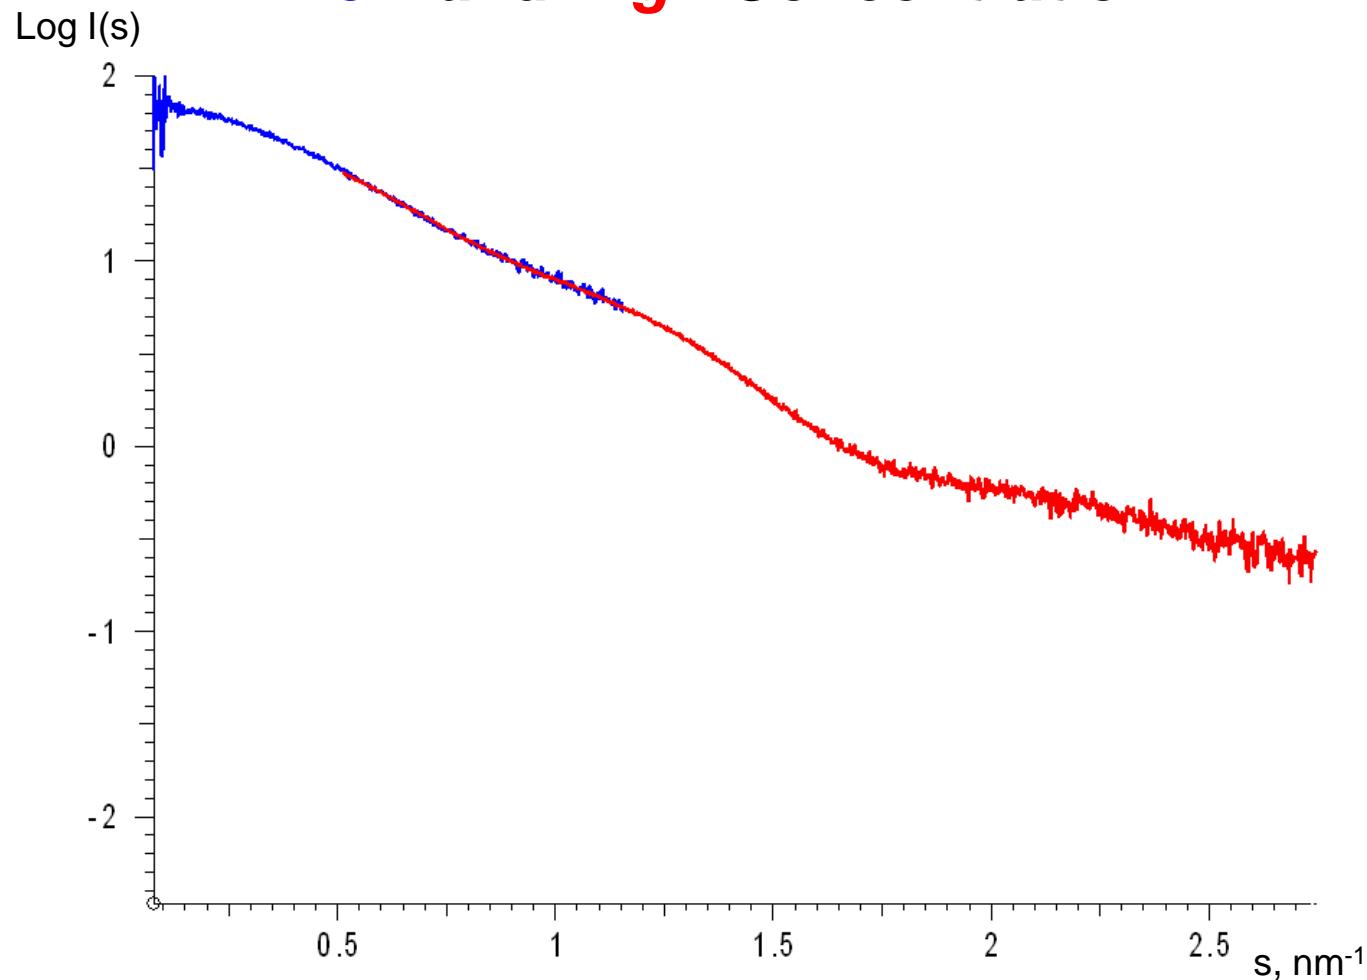

# Dilution series

## *Low and High Concentration*

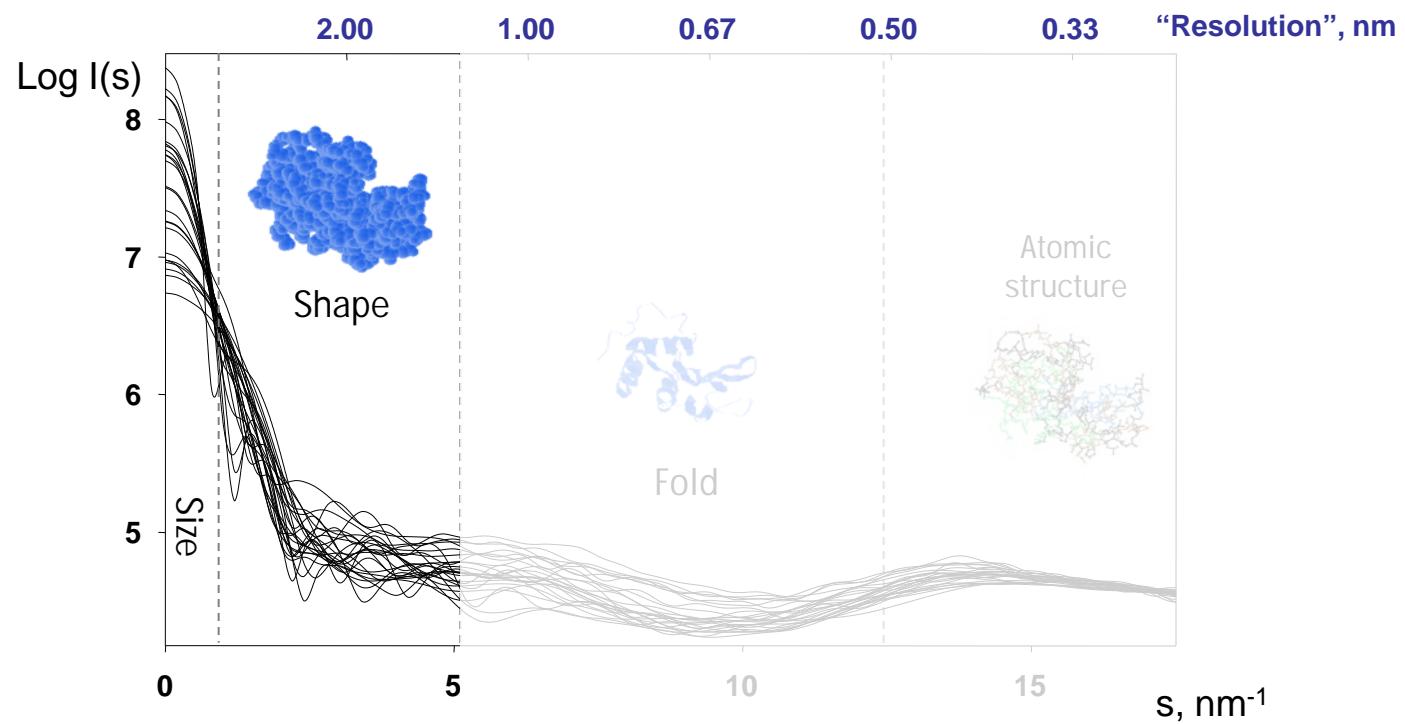

# Merging data

*Low and High Concentration*

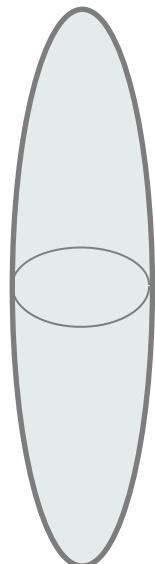

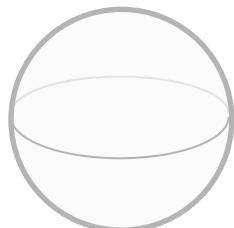

# Data range

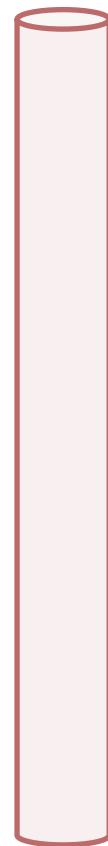

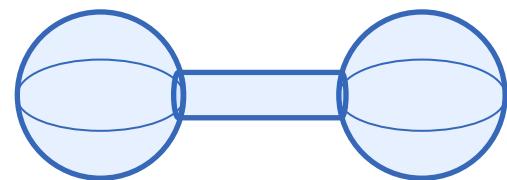

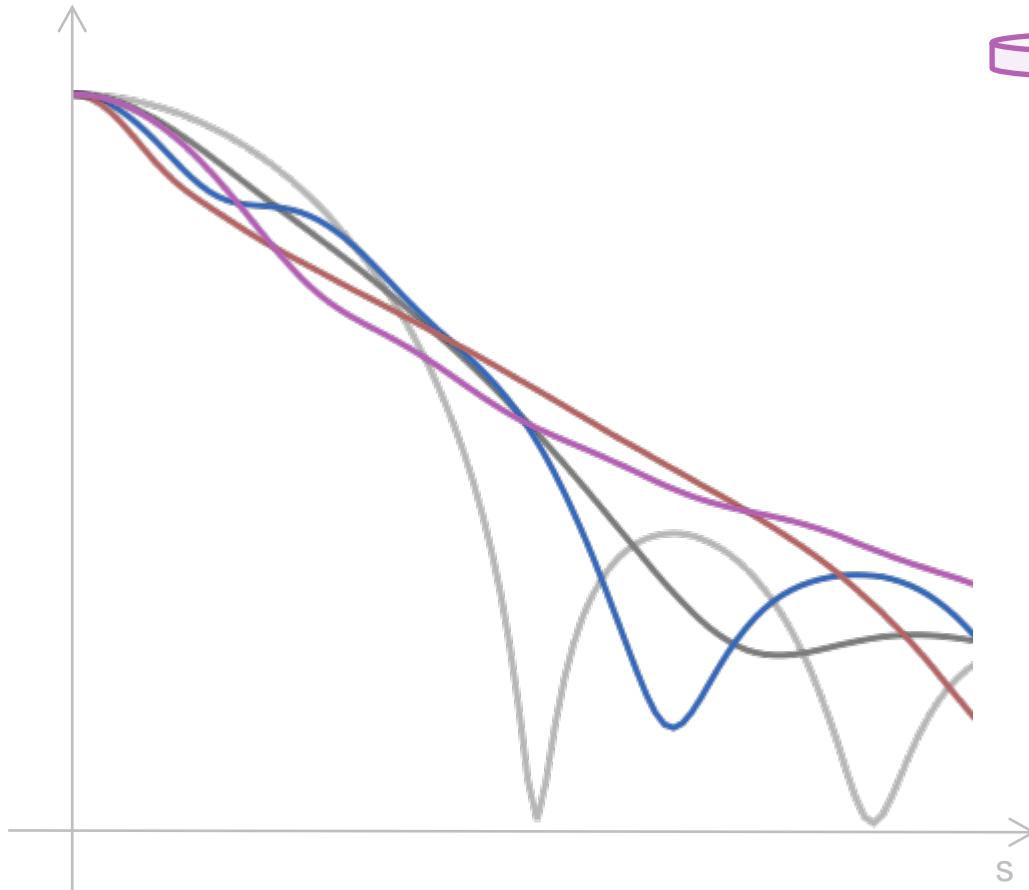

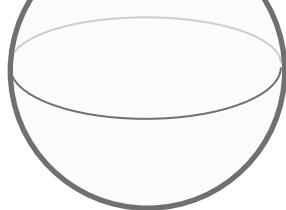

$$s_{\min} = \pi/D_{\max}$$

# Shape

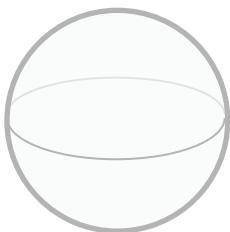

Log I(s)

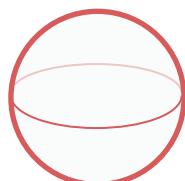

200 nm<sup>3</sup>

100 nm<sup>3</sup>

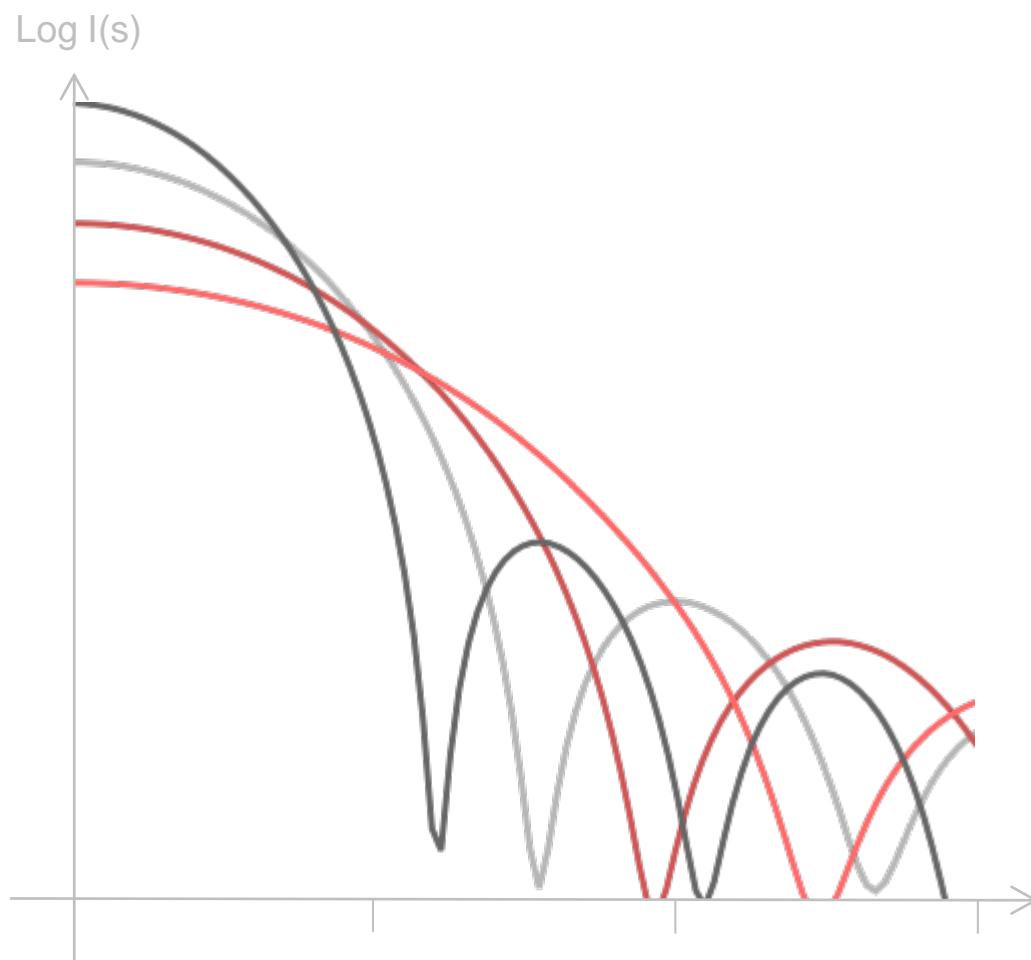

50 nm<sup>3</sup>

25 nm<sup>3</sup>

# Size

# Radius of gyration ( $R_g$ )

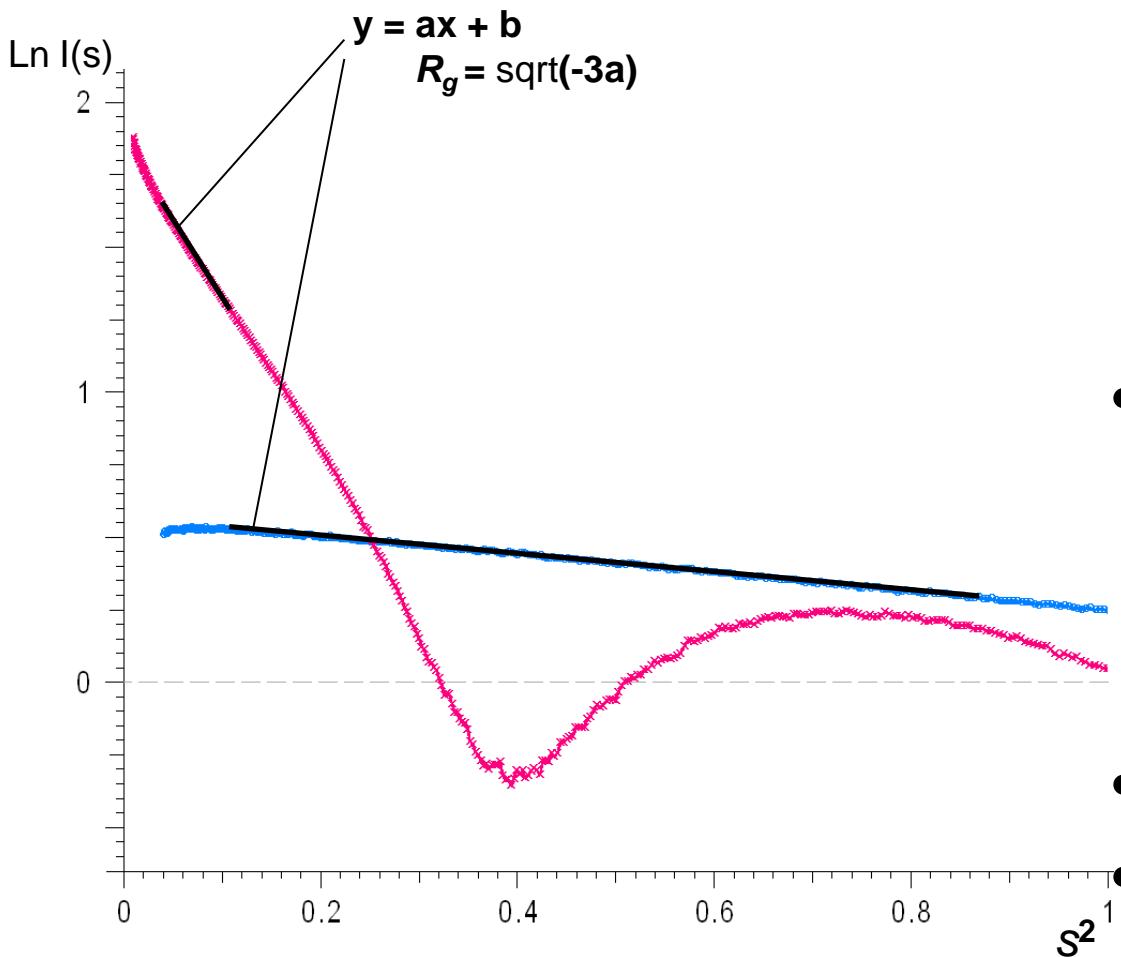

## ***Definition***

Measure for the overall size of a macromolecule

Average of square center-of-mass  
distances in the molecule  
weighted by the scattering length density

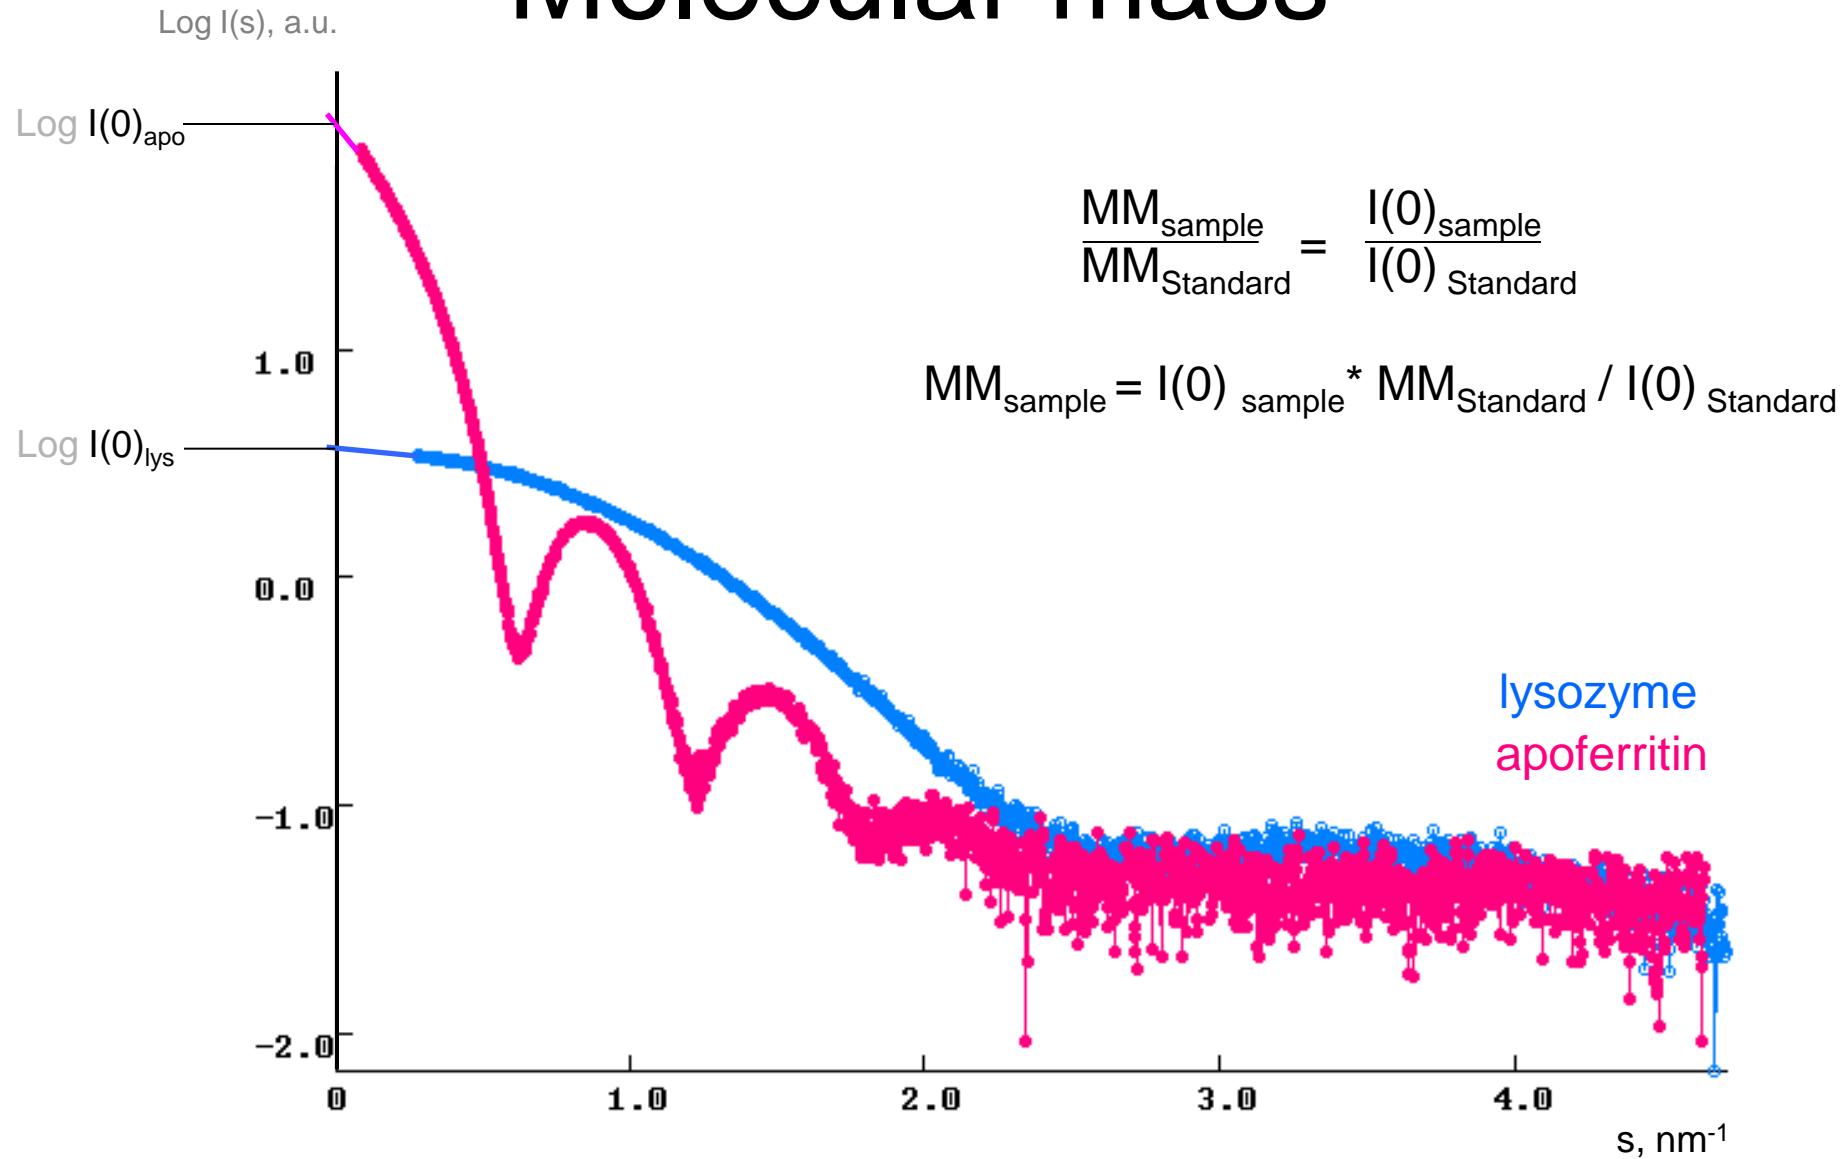

# Radius of gyration ( $R_g$ )

## *Guinier plot*

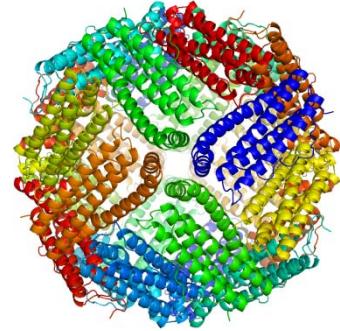

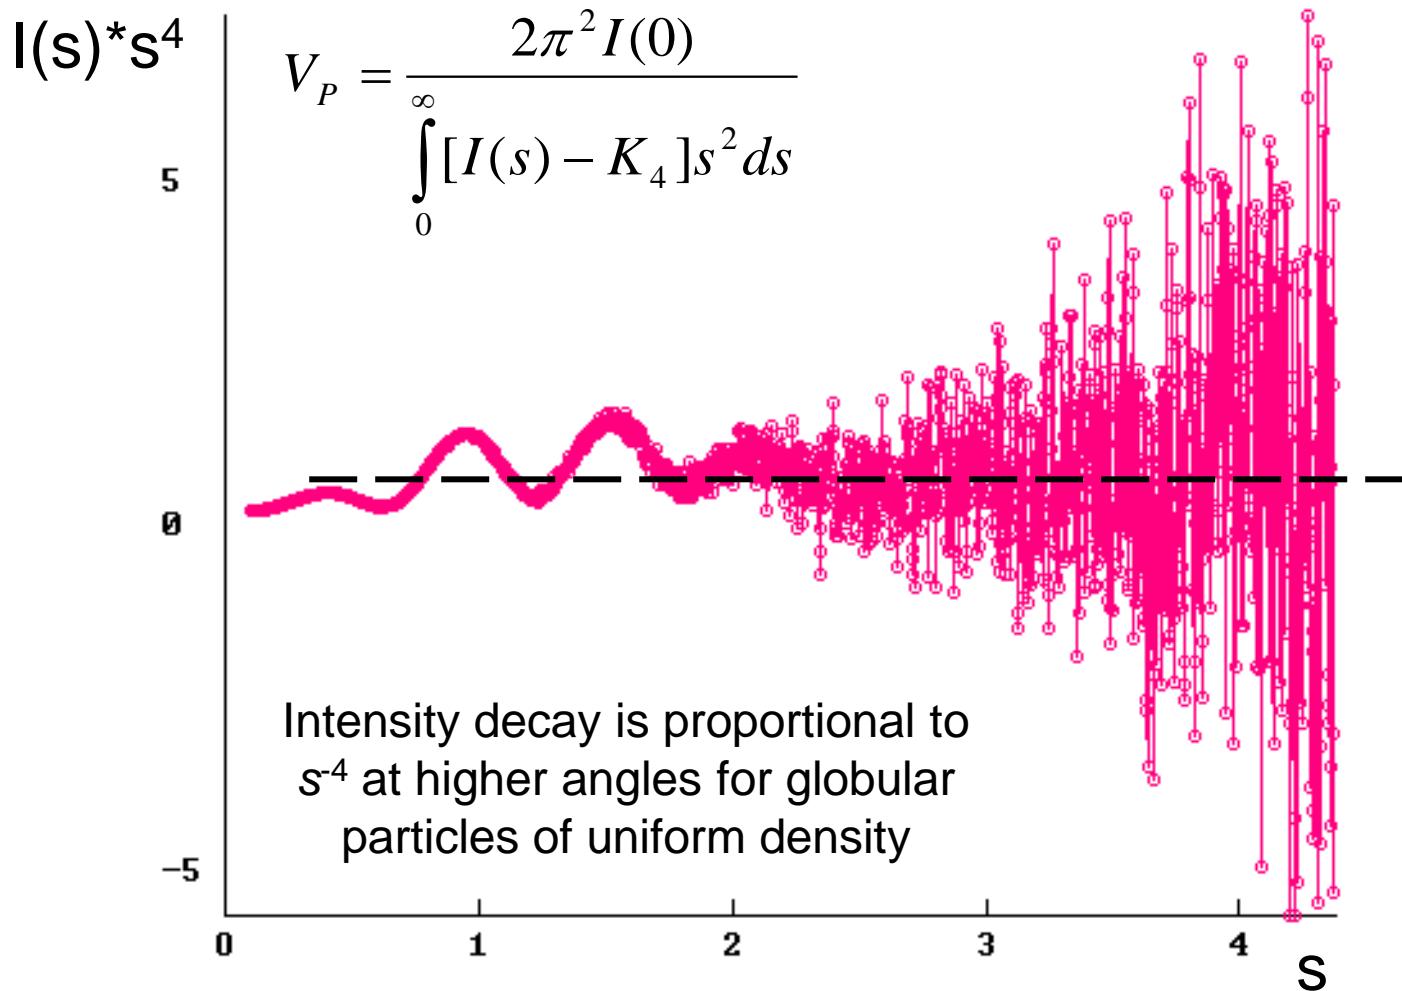

- Estimate of the overall size of the particles
  - Guinier approximation:
$$I(s) = I(0)\exp(-s^2 R_g^2/3)$$
$$sR_g \lesssim 1.3$$
- Quality of the data
  - aggregation
  - polydispersity
  - improper background subtraction
- Zero angle intensity  $I(0)$
- First point to use

# Molecular mass

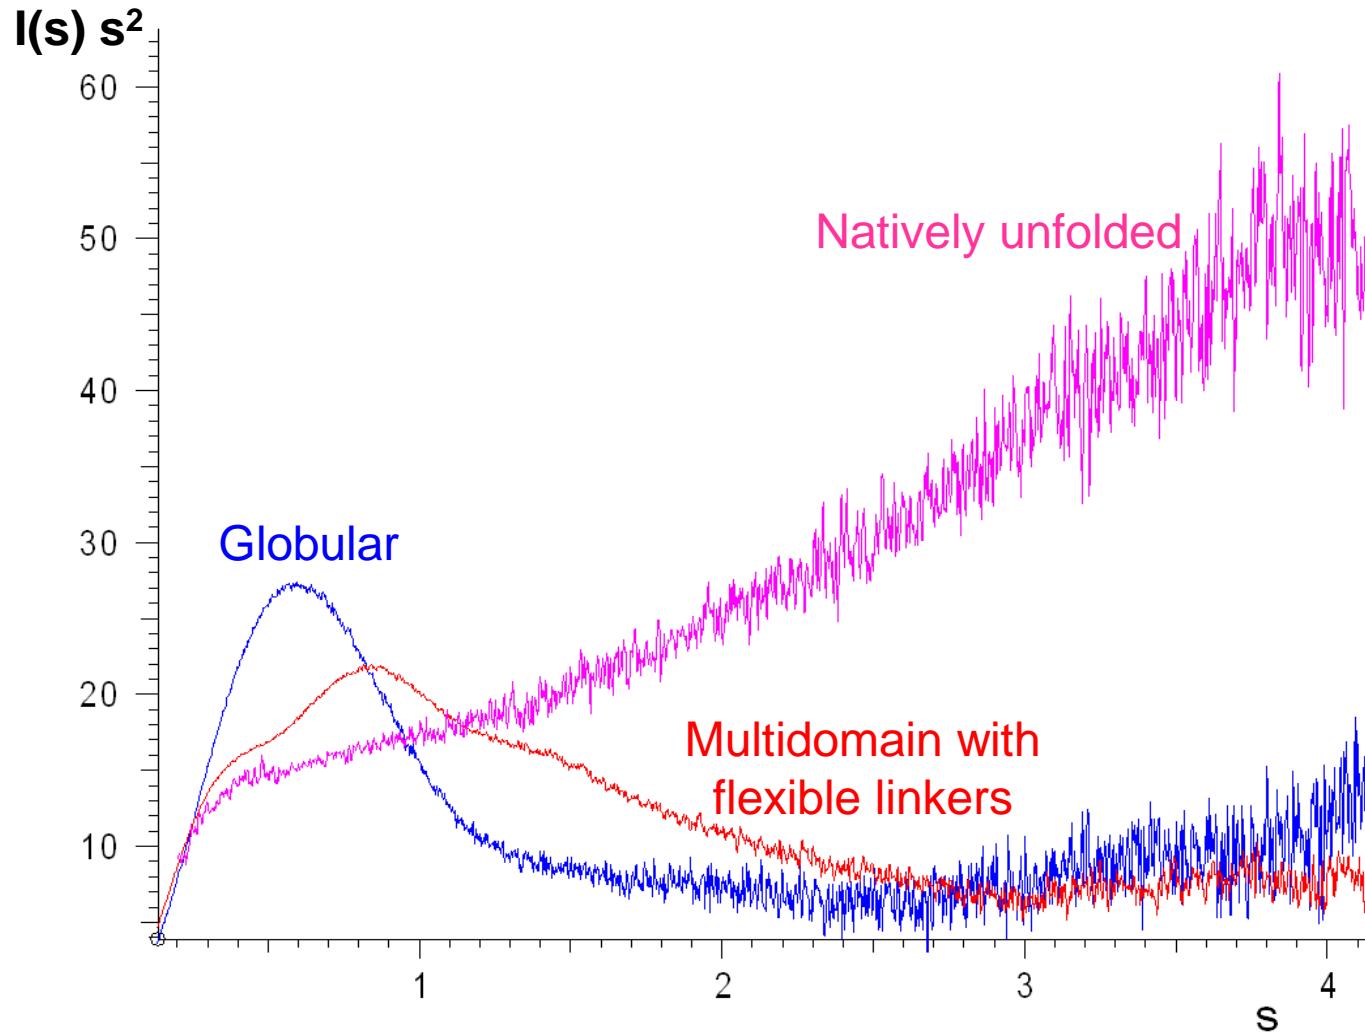

# Porod plot, volume

Excluded volume of  
the hydrated particle:

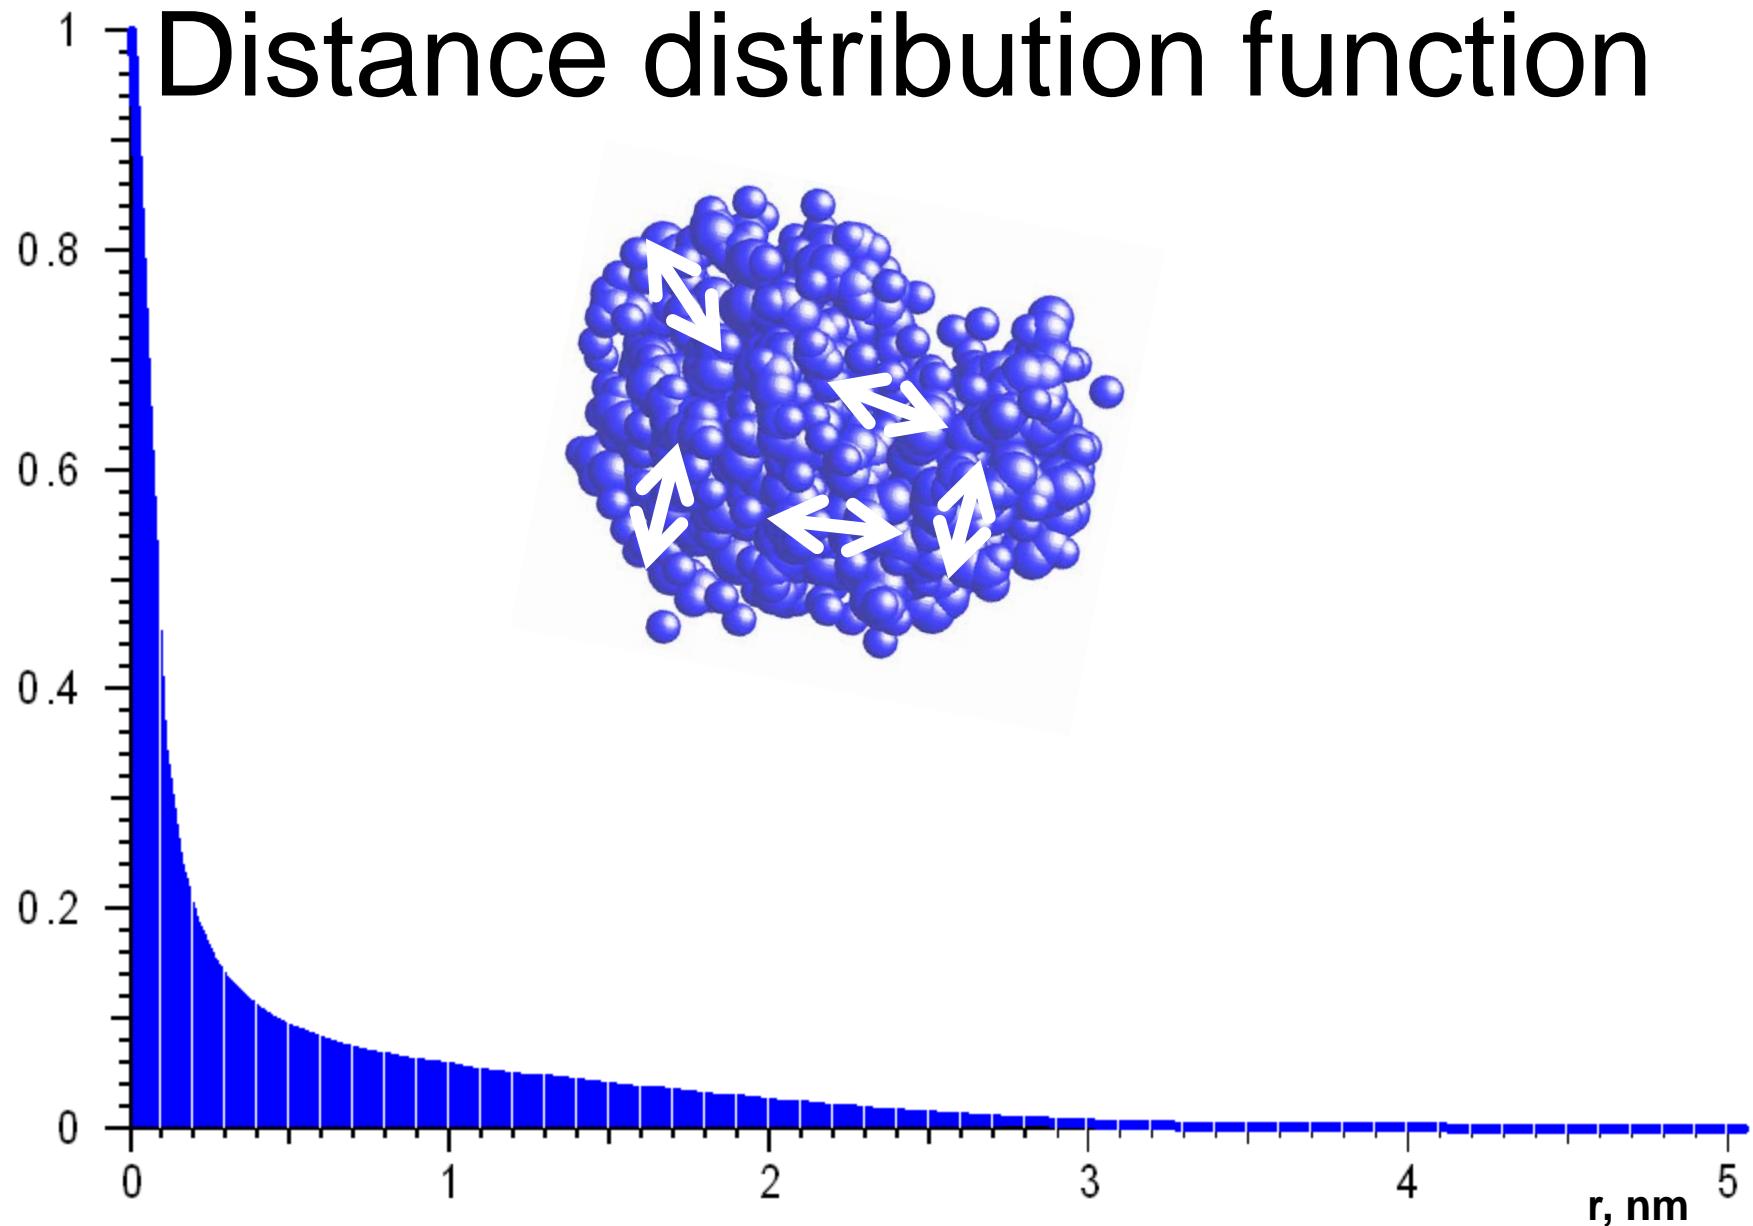

# Kratky plot

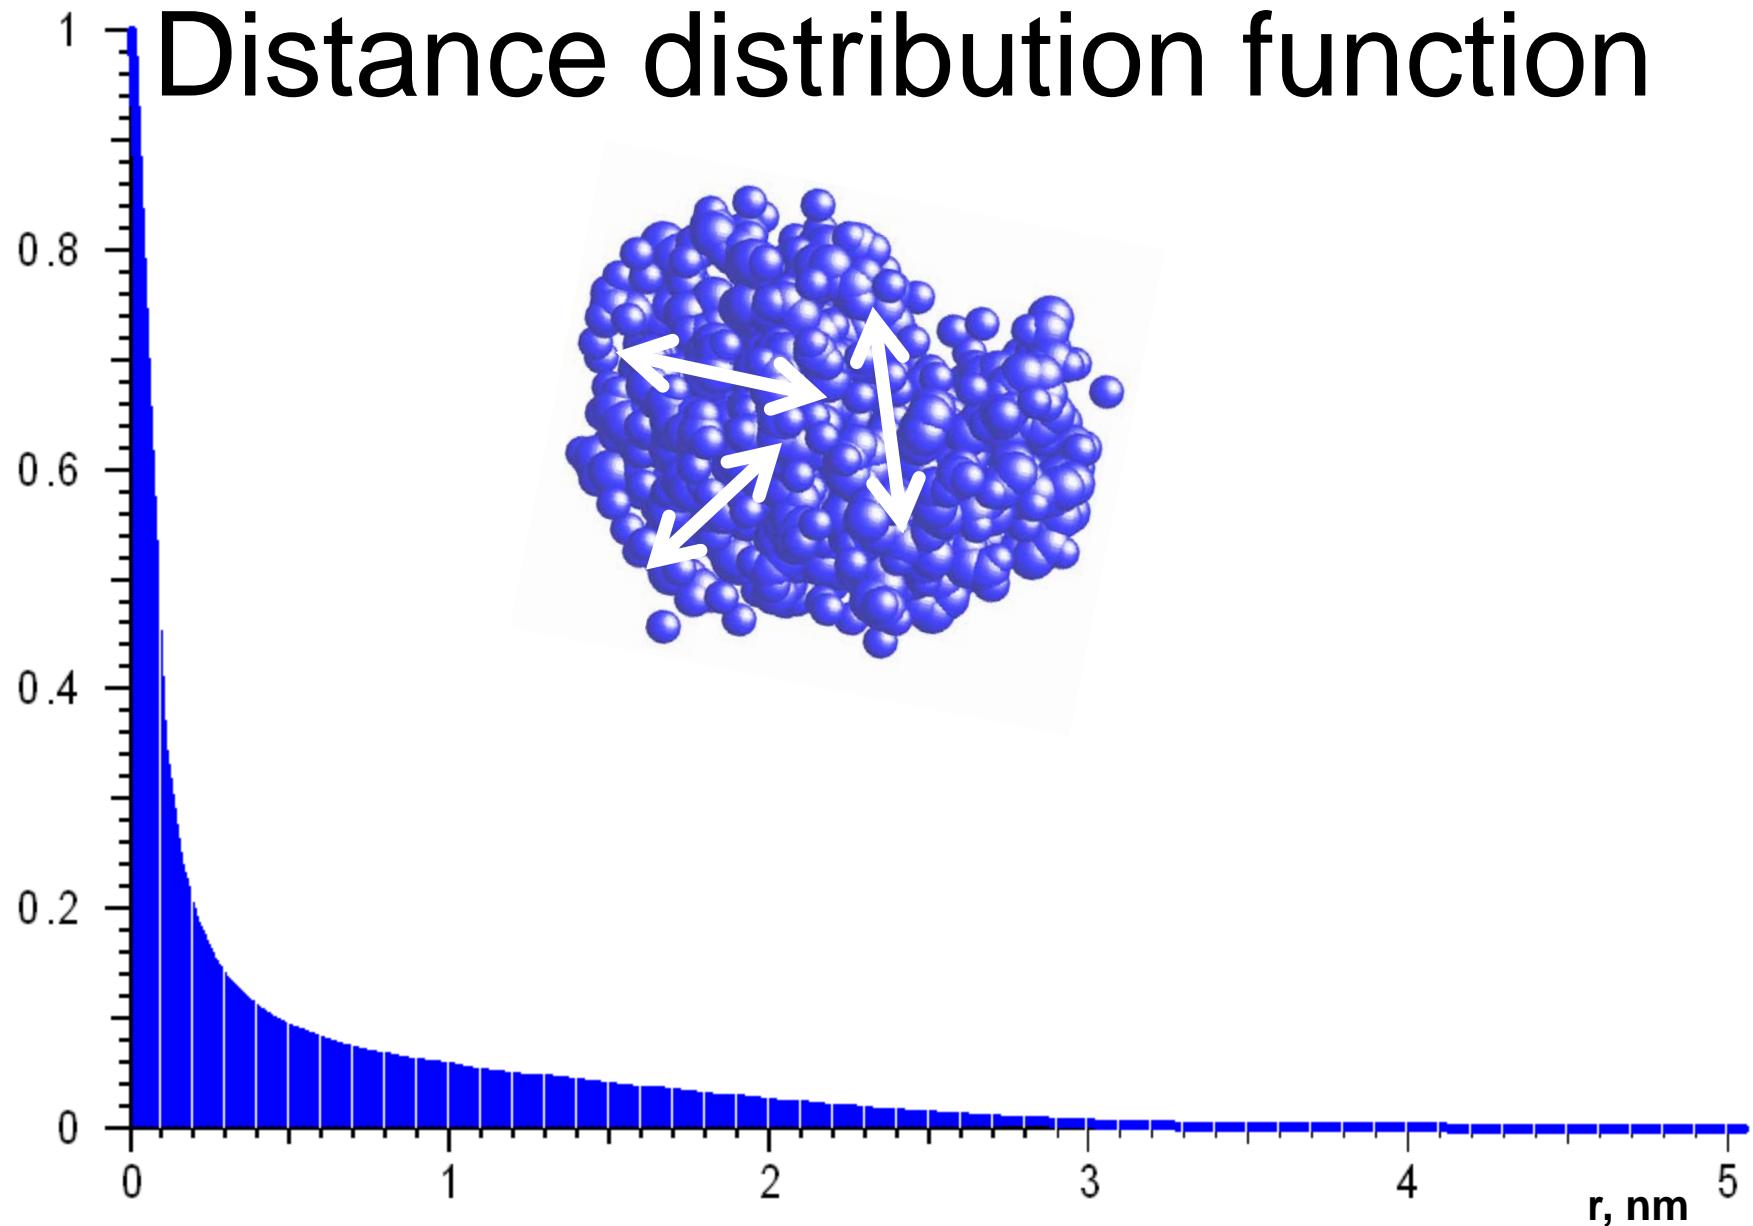

*Patterns of globular and flexible proteins*

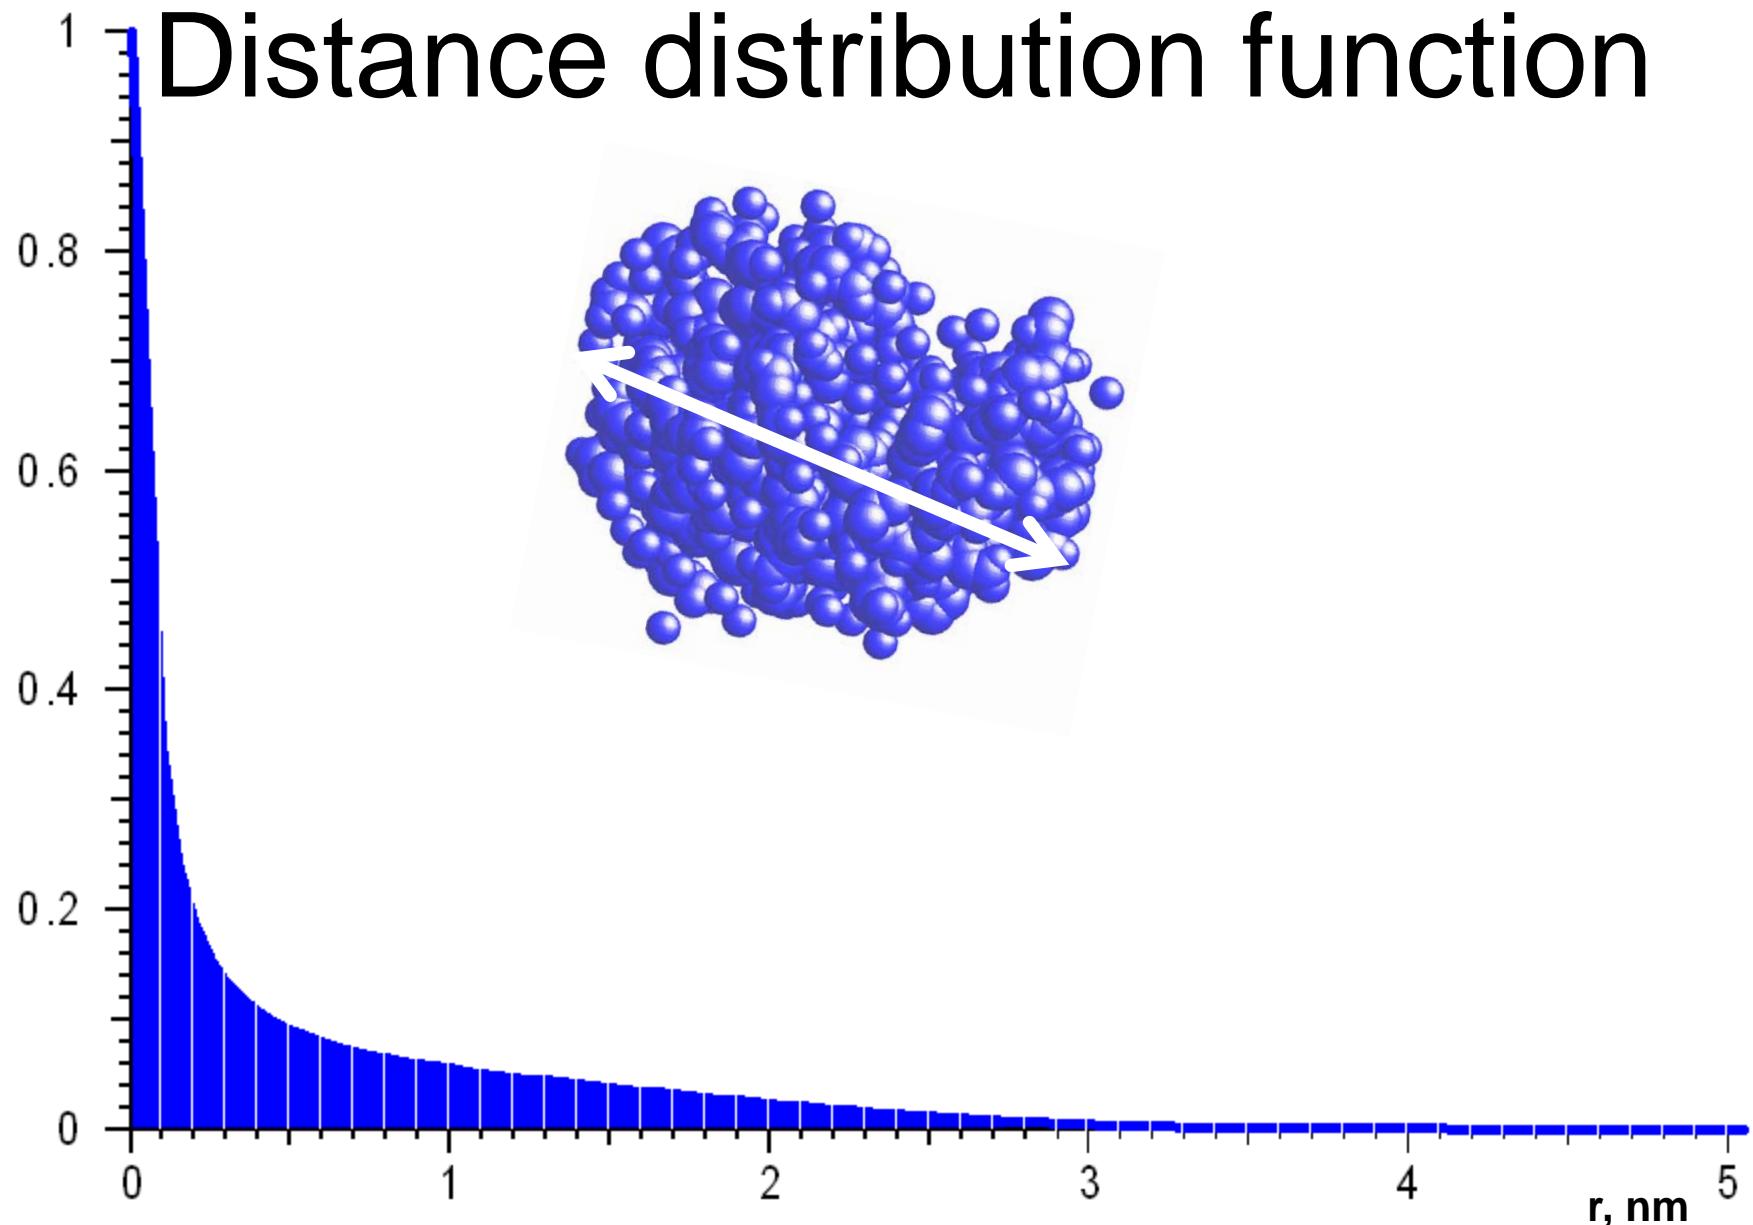

$\gamma(r)$

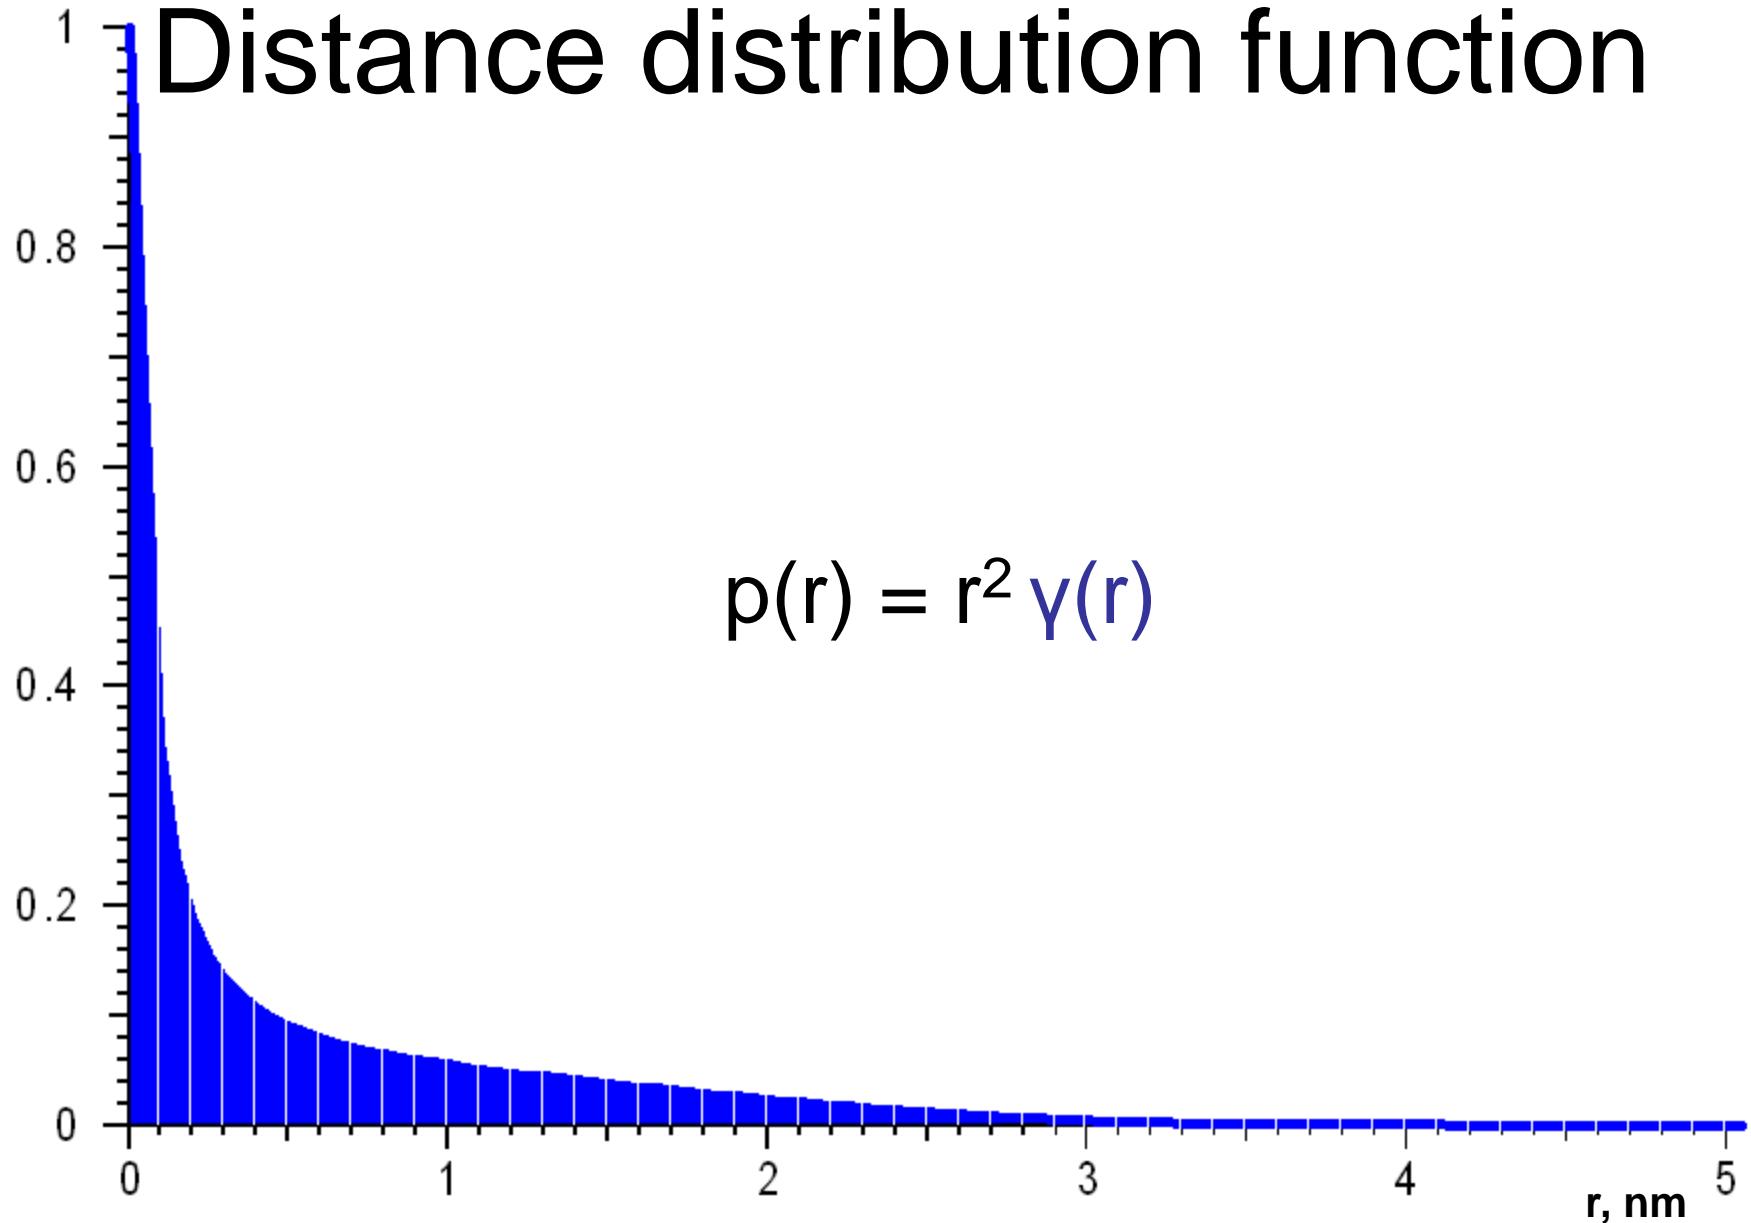

$\gamma(r)$

# Distance distribution function

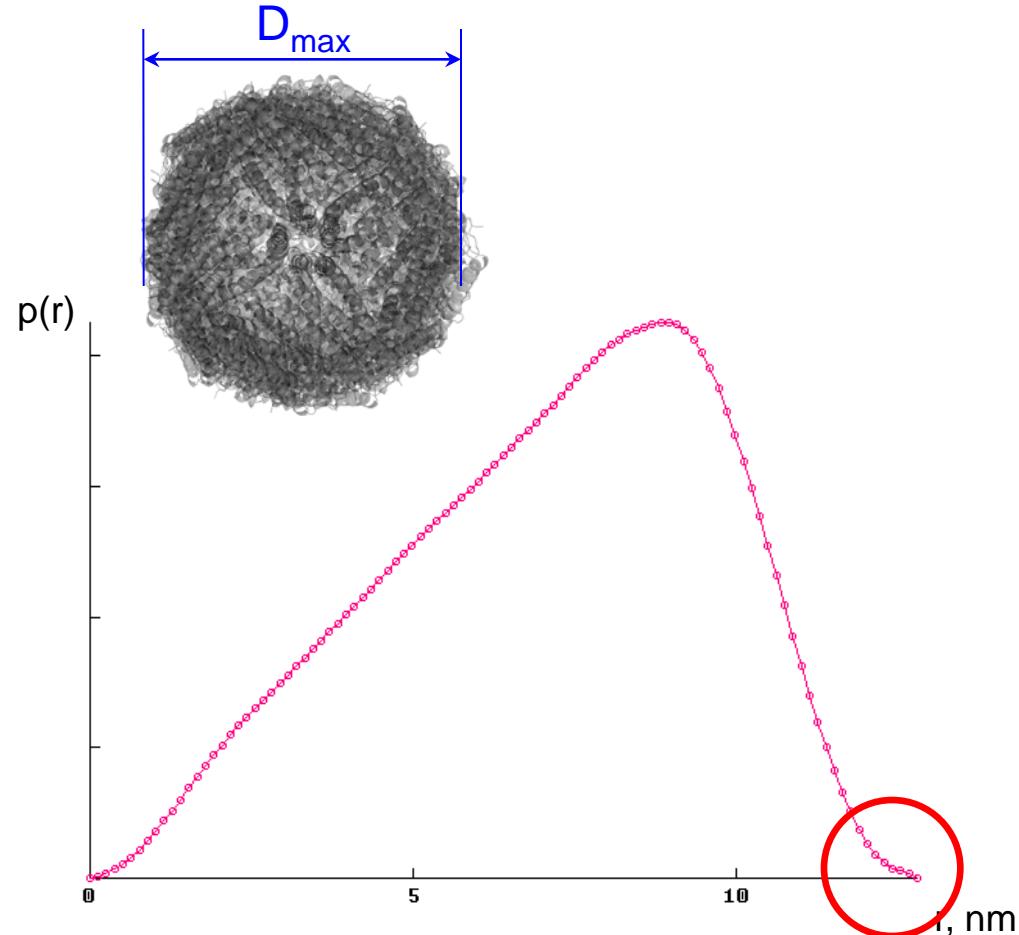

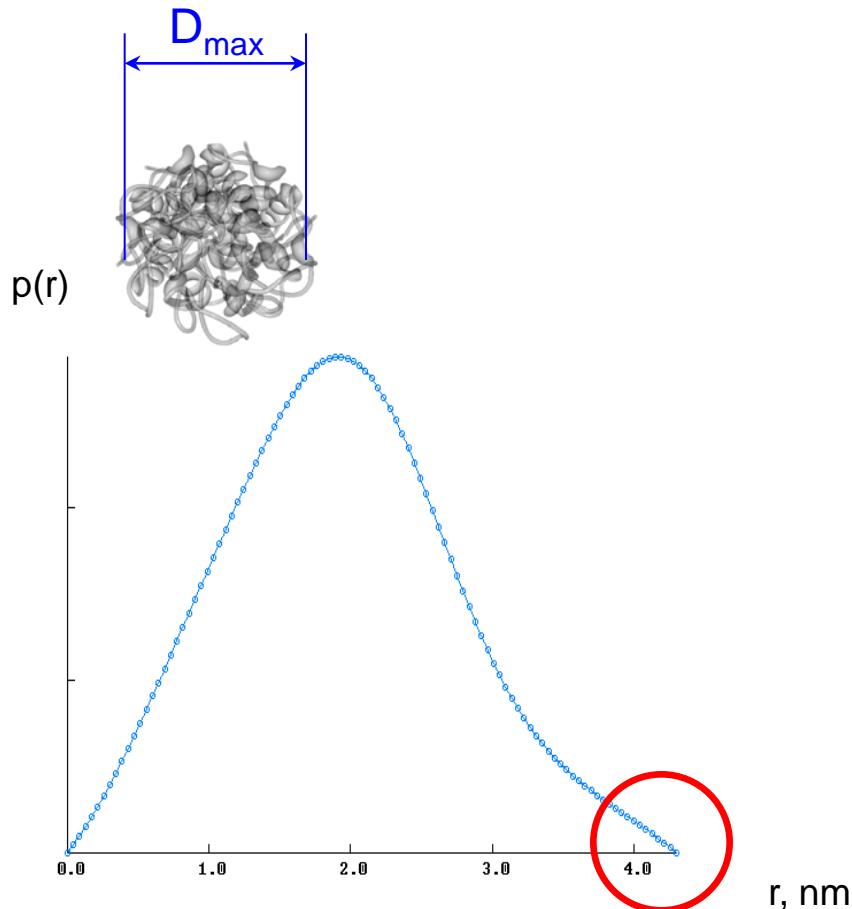

# Distance distribution function

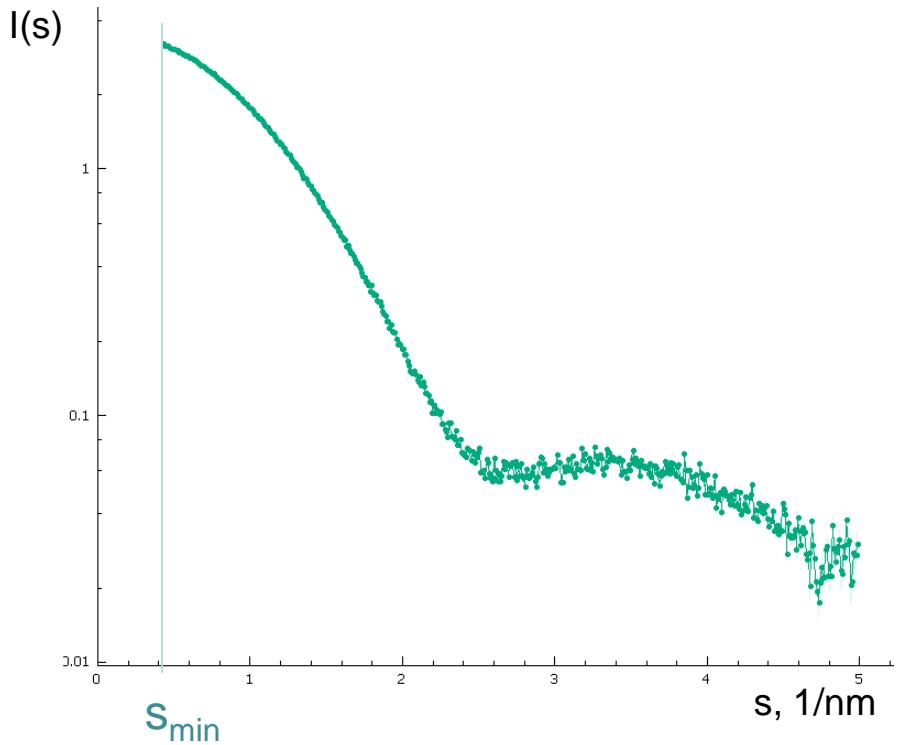

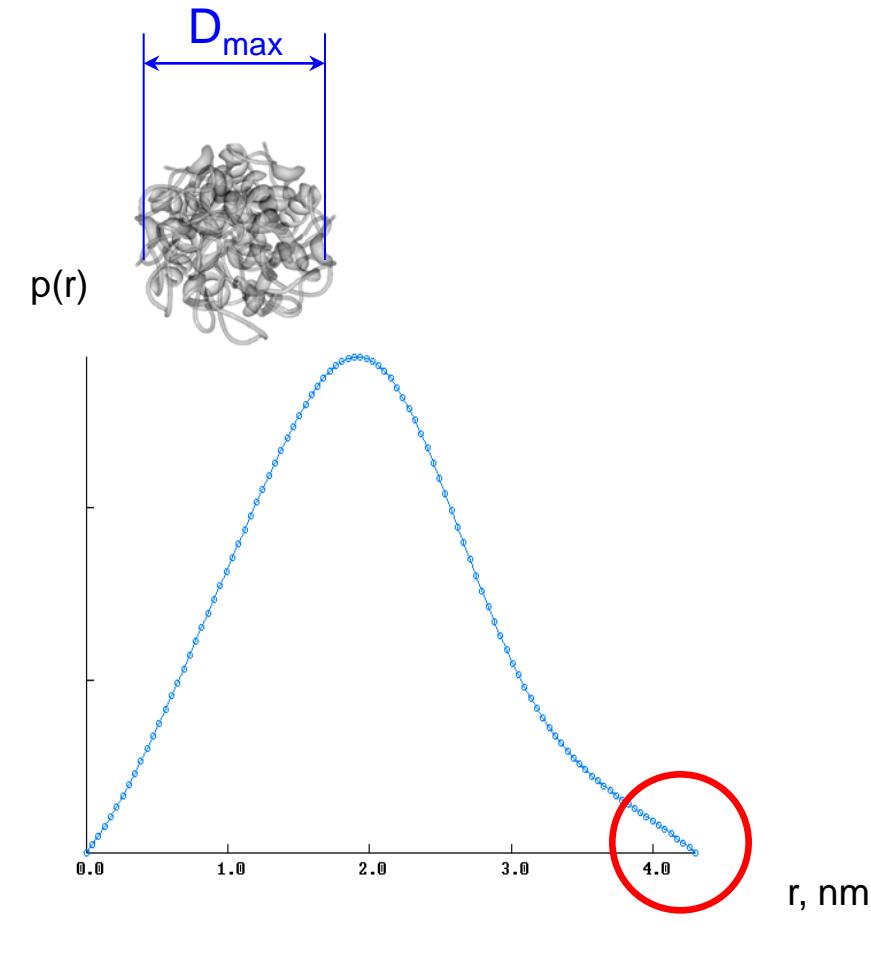

# $p(r)$ plot

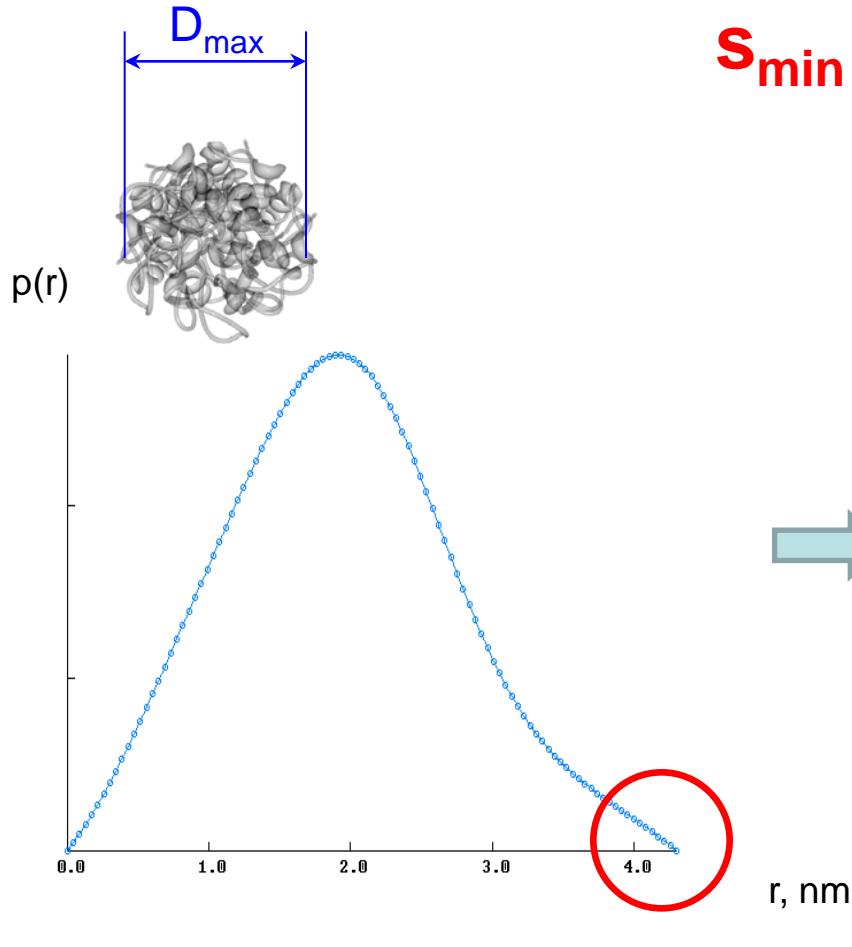

## *Distance distribution function*

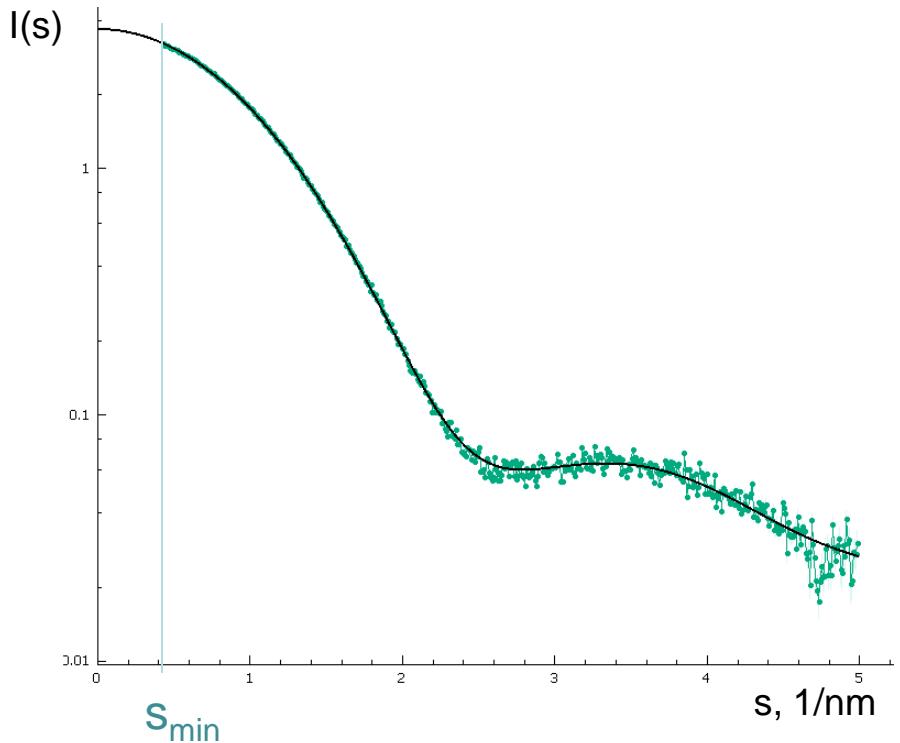

# Data quality

# Data quality

$$s_{\min} \leq \pi/D_{\max}$$

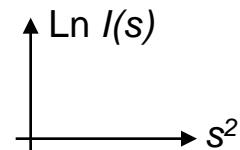

# Summary

- Exposure 3D → 2D
- Radial averaging → 1D
- Normalization
- Background subtraction
- Analysis

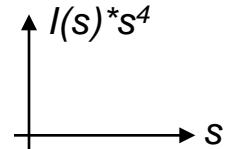

- Log plot

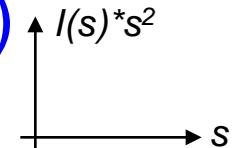

- Guinier plot ( $R_g$ , MM)

- Porod plot

- Kratky plot (flexibility)

- $p(r)$  plot
